**CYP1A1 Antibody (Center) - Protein Information****Name** CYP1A1 {ECO:0000303|PubMed:10681376, ECO:0000312|HGNC:HGNC:2595}

**Function** A cytochrome P450 monooxygenase involved in the metabolism of various endogenous substrates, including fatty acids, steroid hormones and vitamins (PubMed:[10681376](#), PubMed:[11555828](#), PubMed:[12865317](#), PubMed:[14559847](#), PubMed:[15041462](#), PubMed:[15805301](#), PubMed:[18577768](#), PubMed:[19965576](#), PubMed:[20972997](#)). Mechanistically, uses molecular oxygen inserting one oxygen atom into a substrate, and reducing the second into a water molecule, with two electrons provided by NADPH via cytochrome P450 reductase (NADPH--hemoprotein reductase) (PubMed:[10681376](#), PubMed:[11555828](#), PubMed:[12865317](#), PubMed:[14559847](#), PubMed:[15041462](#), PubMed:[15805301](#), PubMed:[18577768](#), PubMed:[19965576](#), PubMed:[20972997](#)). Catalyzes the hydroxylation of carbon-hydrogen bonds. Exhibits high catalytic activity for the formation of hydroxysteroids from estrone (E1) and 17beta-estradiol (E2), namely 2-hydroxy E1 and E2, as well as D-ring hydroxylated E1 and E2 at the C15-alpha and C16- alpha positions (PubMed:[11555828](#), PubMed:[12865317](#), PubMed:[14559847](#), PubMed:[15805301](#)). Displays different regioselectivities for polyunsaturated fatty acids (PUFA) hydroxylation (PubMed:[15041462](#), PubMed:[18577768](#)). Catalyzes the epoxidation of double bonds of certain PUFA (PubMed:[15041462](#), PubMed:[19965576](#), PubMed:[20972997](#)). Converts arachidonic acid toward epoxyeicosatrienoic acid (EET) regioisomers, 8,9-, 11,12-, and 14,15-EET, that function as lipid mediators in the vascular system (PubMed:[20972997](#)). Displays an absolute stereoselectivity in the epoxidation of eicosapentaenoic acid (EPA) producing the 17(R),18(S) enantiomer (PubMed:[15041462](#)). May play an important role in all-trans retinoic acid biosynthesis in extrahepatic tissues. Catalyzes two successive oxidative transformation of all-trans retinol to all-trans retinal and then to the active form all-trans retinoic acid (PubMed:[10681376](#)). May also participate in eicosanoids metabolism by converting hydroperoxide species into oxo metabolites (lipoxygenase-like reaction, NADPH-independent) (PubMed:[21068195](#)).

#### **CYP1A1 Antibody (Center) - Background**

CYP1A1 is a member of the cytochrome P450 superfamily of enzymes. The cytochrome P450 proteins are monooxygenases which catalyze many reactions involved in drug metabolism and synthesis of cholesterol, steroids and other lipids. This protein localizes to the endoplasmic reticulum and its expression is induced by some polycyclic aromatic hydrocarbons (PAHs), some of which are found in cigarette smoke. The enzyme's endogenous substrate is unknown; however, it is able to metabolize some PAHs to carcinogenic intermediates. CYP1A1 gene has been associated with lung cancer risk.
