

Galectin 3 Antibody

Rabbit mAb Catalog # AP91134

Specification

Galectin 3 Antibody - Product Information

Application WB, FC, ICC
Primary Accession P17931
Reactivity Rat
Clonality Monoclonal

Other Names

CBP35; Gal-3; 35 kDa lectin; GALBP; IgE-binding protein; Laminin-binding protein; Lectin L-29;

Mac-2 antigen; LGALS3; MAC2; Galectin 3; Galectin3;

Isotype Rabbit IgG
Host Rabbit
Calculated MW 26152 Da

Galectin 3 Antibody - Additional Information

Dilution WB~~1:1000

FC~~1:10~50 ICC~~N/A

Purification Affinity-chromatography

Immunogen A synthesized peptide derived from human

Galectin 3

Description Galactose-specific lectin which binds IgE.

May mediate with the alpha-3, beta-1 integrin the stimulation by CSPG4 of endothelial cells migration. Together with

DMBT1, required for terminal

differentiation of columnar epithelial cells

during early embryogenesis.

Storage Condition and Buffer Rabbit IgG in phosphate buffered saline ,

pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term. Avoid

freeze / thaw cycle.

Galectin 3 Antibody - Protein Information

Name LGALS3 (HGNC:6563)

Synonyms MAC2

Function

Galactose-specific lectin which binds IgE. May mediate with the alpha-3, beta-1 integrin the stimulation by CSPG4 of endothelial cells migration. Together with DMBT1, required for terminal differentiation of columnar epithelial cells during early embryogenesis (By similarity). In the

nucleus: acts as a pre-mRNA splicing factor. Involved in acute inflammatory responses including neutrophil activation and adhesion, chemoattraction of monocytes macrophages, opsonization of apoptotic neutrophils, and activation of mast cells. Together with TRIM16, coordinates the recognition of membrane damage with mobilization of the core autophagy regulators ATG16L1 and BECN1 in response to damaged endomembranes.

Cellular Location

Cytoplasm. Nucleus. Secreted. Note=Secreted by a non- classical secretory pathway and associates with the cell surface. Can be secreted; the secretion is dependent on protein unfolding and facilitated by the cargo receptor TMED10; it results in protein translocation from the cytoplasm into the ERGIC (endoplasmic reticulum- Golgi intermediate compartment) followed by vesicle entry and secretion (PubMed:32272059).

Tissue Location

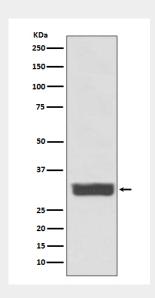

A major expression is found in the colonic epithelium. It is also abundant in the activated macrophages. Expressed in fetal membranes.

Galectin 3 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

Galectin 3 Antibody - Images

Western blot analysis of Galectin 3 expression in MCF-7 cell lysate.
