### SULT2A1 Antibody - Protein Information

**Name** SULT2A1

**Synonyms** HST, STD

#### Function

Sulfotransferase that utilizes 3'-phospho-5'-adenylyl sulfate (PAPS) as sulfonate donor to catalyze the sulfonation of steroids and bile acids in the liver and adrenal glands. Mediates the sulfation of a wide range of steroids and sterols, including pregnenolone, androsterone, DHEA, bile acids, cholesterol and as well many xenobiotics that contain alcohol and phenol functional groups (PubMed: [14573603](http://www.uniprot.org/citations/14573603), PubMed: [18042734](http://www.uniprot.org/citations/18042734), PubMed: [19589875](http://www.uniprot.org/citations/19589875), PubMed: [21187059](http://www.uniprot.org/citations/21187059)),

Sulfonation increases the water solubility of most compounds, and therefore their renal excretion, but it can also result in bioactivation to form active metabolites. Plays an important role in maintaining steroid and lipid homeostasis (PubMed:<a href="http://www.uniprot.org/citations/14573603" target="\_blank">14573603</a>, PubMed:<a href="http://www.uniprot.org/citations/19589875" target="\_blank">19589875</a>, PubMed:<a href="http://www.uniprot.org/citations/21187059" target="\_blank">21187059</a>). Plays a key role in bile acid metabolism (PubMed:<a href="http://www.uniprot.org/citations/2268288" target="\_blank">2268288</a>). In addition, catalyzes the metabolic activation of potent carcinogenic polycyclic arylmethanols (By similarity).

### Cellular Location

Cytoplasm.

### Tissue Location

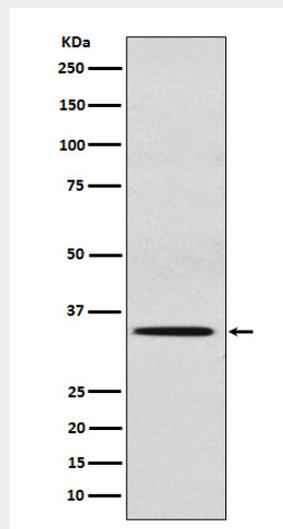

Liver, adrenal and at lower level in the kidney. Is present in human fetus in higher level in the adrenal than the liver and the kidney
