

## **GRB2 Antibody**

Rabbit mAb **Catalog # AP93271** 

## **Specification**

#### **GRB2 Antibody - Product Information**

WB, IHC, ICC Application **Primary Accession** P62993 Reactivity Rat

Clonality Monoclonal

**Other Names** 

ASH; EGFRBP GRB2; Grb2; Growth factor receptor bound protein 2; Growth factor receptor bound

protein 3; HT027; NCKAP2; SEM5;

Isotype Rabbit IgG Host **Rabbit** Calculated MW 25206 Da

## **GRB2 Antibody - Additional Information**

Dilution WB~~1:1000

IHC~~1:100~500

ICC~~N/A

Purification **Affinity-chromatography** 

**Immunogen** A synthesized peptide derived from human

Description Adapter protein that provides a critical link

between cell surface growth factor

receptors and the Ras signaling pathway.

Isoform GRB3-3 does not bind to

phosphorylated epidermal growth factor receptor (EGFR) but inhibits EGF-induced transactivation of a RAS-responsive

element.

Rabbit IgG in phosphate buffered saline, Storage Condition and Buffer

pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term. Avoid

freeze / thaw cycle.

## **GRB2 Antibody - Protein Information**

Name GRB2

**Synonyms** ASH

Non-enzymatic adapter protein that plays a pivotal role in precisely regulated signaling cascades from cell surface receptors to cellular responses, including signaling transduction and gene

expression (PubMed:<a href="http://www.uniprot.org/citations/11726515" target=" blank">11726515</a>, PubMed:<a href="http://www.uniprot.org/citations/37626338" target="blank">37626338</a>). Thus, participates in many biological processes including regulation of innate and adaptive immunity, autophagy, DNA repair or necroptosis (PubMed: <a href="http://www.uniprot.org/citations/35831301" target=" blank">35831301</a>, PubMed:<a href="http://www.uniprot.org/citations/37626338" target="blank">37626338</a>, PubMed:<a href="http://www.uniprot.org/citations/38182563" target=" blank">38182563</a>). Controls signaling complexes at the T-cell antigen receptor to facilitate the activation, differentiation, and function of T-cells (PubMed:<a href="http://www.uniprot.org/citations/36864087" target=" blank">36864087</a>, PubMed:<a href="http://www.uniprot.org/citations/9489702" target="blank">9489702</a>). Mechanistically, engagement of the TCR leads to phosphorylation of the adapter protein LAT, which serves as docking site for GRB2 (PubMed: <a href="http://www.uniprot.org/citations/9489702" target=" blank">9489702</a>). In turn, GRB2 establishes a a connection with SOS1 that acts as a quanine nucleotide exchange factor and serves as a critical regulator of KRAS/RAF1 leading to MAPKs translocation to the nucleus and activation (PubMed: <a href="http://www.uniprot.org/citations/12171928" target=" blank">12171928</a>, PubMed:<a href="http://www.uniprot.org/citations/25870599" target=" blank">25870599</a>). Functions also a role in B-cell activation by amplifying Ca(2+) mobilization and activation of the ERK MAP kinase pathway upon recruitment to the phosphorylated B-cell antigen receptor (BCR) (PubMed: <a href="http://www.uniprot.org/citations/25413232" target=" blank">25413232</a>, PubMed:<a href="http://www.uniprot.org/citations/29523808" target="blank">29523808</a>). Plays a role in switching between autophagy and programmed necrosis upstream of EGFR by interacting with components of necrosomes including RIPK1 and with autophagy regulators SQSTM1 and BECN1 (PubMed:<a href="http://www.uniprot.org/citations/35831301" target=" blank">35831301</a>, PubMed:<a href="http://www.uniprot.org/citations/38182563" target=" blank">38182563</a>). Regulates miRNA biogenesis by forming a functional ternary complex with AGO2 and DICER1 (PubMed:<a href="http://www.uniprot.org/citations/37328606" target=" blank">37328606</a>). Functions in the replication stress response by protecting DNA at stalled replication forks from MRE11-mediated degradation. Mechanistically, inhibits RAD51 ATPase activity to stabilize RAD51 on stalled replication forks (PubMed: <a href="http://www.uniprot.org/citations/38459011" target=" blank">38459011</a>). Additionally, directly recruits and later releases MRE11 at DNA damage sites during the homology-directed repair (HDR) process (PubMed: <a href="http://www.uniprot.org/citations/34348893" target=" blank">34348893</a>).

## **Cellular Location**

Nucleus. Cytoplasm. Endosome. Golgi apparatus {ECO:0000250|UniProtKB:Q60631}

#### **GRB2 Antibody - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

# **GRB2 Antibody - Images**
