

Histone H3 (Acetyl Lys36) Rabbit Polyclonal Antibody
Histone H3 (Acetyl Lys36) Rabbit Polyclonal Antibody
Catalog # AP93598

Specification

Histone H3 (Acetyl Lys36) Rabbit Polyclonal Antibody - Product Information

Application	WB
Primary Accession	P68431/Q71DI3/P84243
Reactivity	Rat, Human, Mouse
Clonality	Polyclonal

Histone H3 (Acetyl Lys36) Rabbit Polyclonal Antibody - Additional Information

Dilution

WB~~1:1000

Storage Conditions

-20°C

Histone H3 (Acetyl Lys36) Rabbit Polyclonal Antibody - Protein Information

Histone H3 (Acetyl Lys36) Rabbit Polyclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

Histone H3 (Acetyl Lys36) Rabbit Polyclonal Antibody - Images

Western blot analysis of extracts from Hela cells, untreated (-) or treated, 1:2000. Secondary antibody was diluted at 1:20000 cells nucleus extracted by Minute TM Cytoplasmic and Nuclear Fractionation kit.

Histone H3 (Acetyl Lys36) Rabbit Polyclonal Antibody - Background

Histones are basic nuclear proteins that are responsible for the nucleosome structure of the chromosomal fiber in eukaryotes. This structure consists of approximately 146 bp of DNA wrapped around a nucleosome, an octamer composed of pairs of each of the four core histones (H2A, H2B, H3, and H4). The chromatin fiber is further compacted through the interaction of a linker histone, H1, with the DNA between the nucleosomes to form higher order chromatin structures. This gene is intronless and encodes a replication-dependent histone that is a member of the histone H3 family. Transcripts from this gene lack polyA tails; instead, they contain a palindromic termination element. This gene is found in the large histone gene cluster on chromosome 6p22-p21.3.
