

**Caspase-9 Antibody**  
**Catalog # ASC10049****Specification**

---

**Caspase-9 Antibody - Product Information**

Application	WB, IF, ICC, E, IP
Primary Accession	<a href="#">P55211</a>
Other Accession	<a href="#">P55211</a> , <a href="#">842</a>
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Calculated MW	Predicted: 46 kDa

Application Notes	<b>Observed: 45 kDa KDa</b> Caspase-9 antibody can be used for detection of caspase-9 by Western blot at 1 µg/mL. Antibody can also be used for immunocytochemistry starting at 5 µg/mL. For immunofluorescence start at 5 µg/mL.
-------------------	--

**Caspase-9 Antibody - Additional Information**

Gene ID **842**

**Other Names**

Caspase-9 Antibody: MCH6, APAF3, APAF-3, PPP1R56, ICE-LAP6, MCH6, Caspase-9, Apoptotic protease Mch-6, CASP-9, caspase 9, apoptosis-related cysteine peptidase

**Target/Specificity**

Caspase-9 antibody was raised against a 20 amino acid peptide near the center of human Caspase-9. The immunogen is located within amino acids 290 - 340 of Caspase-9.

**Reconstitution & Storage**

Caspase-9 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

**Precautions**

Caspase-9 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

**Caspase-9 Antibody - Protein Information**

**Name** CASP9

**Synonyms** MCH6

**Function**

Involved in the activation cascade of caspases responsible for apoptosis execution. Binding of caspase-9 to Apaf-1 leads to activation of the protease which then cleaves and activates effector caspases caspase-3 (CASP3) or caspase-7 (CASP7). Promotes DNA damage- induced apoptosis in a ABL1/c-Abl-dependent manner. Proteolytically cleaves poly(ADP-ribose) polymerase (PARP). Cleaves BIRC6 following inhibition of BIRC6-caspase binding by DIABLO/SMAC (PubMed:<a href="http://www.uniprot.org/citations/36758105" target="\_blank">36758105</a>, PubMed:<a href="http://www.uniprot.org/citations/36758106" target="\_blank">36758106</a>).

#### **Tissue Location**

Ubiquitous, with highest expression in the heart, moderate expression in liver, skeletal muscle, and pancreas. Low levels in all other tissues. Within the heart, specifically expressed in myocytes.

#### **Caspase-9 Antibody - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

#### **Caspase-9 Antibody - Images**

Immunohistochemistry of TOLLIP in human brain tissue with TOLLIP antibody at 5 µg/ml.

Western blot analysis of SIRT4 in (A) human and (B) mouse liver tissue lysate with SIRT4 antibody at 0.5 µg/mL

### Caspase-9 Antibody - Background

Caspase-9 Antibody: Apoptosis is related to many diseases and induced by a family of cell death receptors and their ligands. Cell death signals are transduced by death domain containing adapter molecules and members of the caspase family of proteases. A novel member in the caspase family was recently identified and designated ICE-LAP6, Mch6, and Apaf-3. Caspase-9 and Apaf-1 bind to each other, which leads to caspase-9 activation. Caspase-9 is also activated by granzyme B and CPP32. Activated caspase-9 cleaves and activates caspase-3 that is one of the key proteases, being responsible for the proteolytic cleavage of many key proteins in apoptosis. Caspase-9 play a central role in cell death induced by a wide variety of apoptosis activators including TNF $\alpha$ , TRAIL, anti-CD-95, FADD, and TRADD. Caspase-9 is expressed in a variety of human tissues.
