Hrk Antibody
Catalog # ASC10408

Specification

Hrk Antibody - Product Information

Application	**WB, E**
Primary Accession	O00198
Other Accession	NP_003797, 4504493
Reactivity	**Human, Mouse**
Host	**Rabbit**
Clonality	**Polyclonal**
Isotype	**IgG**
Calculated MW	**Predicted: 10 kDa** **Observed: 12 kDa KDa**
Application Notes	**Hrk antibody can be used for the detection of Hrk by Western blot at 2.5 - 5 µg/mL.**

Hrk Antibody - Additional Information

Gene ID **8739**

Other Names
Hrk Antibody: DP5, HARAKIRI, BID3, Activator of apoptosis harakiri, BH3-interacting domain-containing protein 3, harakiri, BCL2 interacting protein (contains only BH3 domain)

Target/Specificity
HRK;

Reconstitution & Storage
Hrk antibody can be stored at 4℃ for three months and -20℃, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions
Hrk Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Hrk Antibody - Protein Information

Name HRK

Synonyms BID3

Function
Promotes apoptosis.

Cellular Location
Membrane; Single-pass membrane protein. Mitochondrion

10320 Camino Santa Fe, Suite G
San Diego, CA 92121

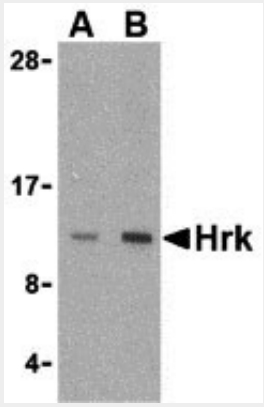
Hrk Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

Hrk Antibody - Images



Western blot analysis of Hrk in mouse pancreas tissue lysate with Hrk antibody at (A) 2.5 and (B) 5 µg/mL.

Hrk Antibody - Background

Hrk Antibody: Apoptosis plays a major role in normal organism development, tissue homeostasis, and removal of damaged cells. Hrk, a pro-apoptotic member of the Bcl-2 homology domain-3 (BH3)-only group of the Bcl-2 family of proteins, was also identified as novel protein induced during programmed neuronal death. It lacks significant homology to other Bcl-2 family members except for an 8-amino acid region that is similar to the BH3 motif of Bik. Hrk regulates apoptosis through interaction with the anti-apoptotic proteins Bcl-2 and Bcl-XL via this domain. It does not interact with the pro-apoptotic proteins Bax, Bak, or Bcl-XS. Hrk localizes to mitochondrial membranes in a pattern similar to that previously reported for Bcl-2 and Bcl-XL.
