

Cyclin O Antibody
Catalog # ASC10435**Specification**

Cyclin O Antibody - Product Information

Application	WB, E
Primary Accession	P22674
Other Accession	NP_066970 , 153791755
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Calculated MW	39 kDa KDa
Application Notes	Cyclin O antibody can be used for the detection of Cyclin O by Western blot at 1 - 2 µg/mL.

Cyclin O Antibody - Additional InformationGene ID **10309****Other Names**

Cyclin O Antibody: CCNU, UDG2, Cyclin-O, Cyclin O

Target/Specificity

CCNO; At least two isoforms of Cyclin O are known to exist; this antibody will recognize both isoforms.

Reconstitution & Storage

Cyclin O antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions

Cyclin O Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Cyclin O Antibody - Protein Information**Name** CCNO ([HGNC:18576](#))**Function**

Specifically required for generation of multiciliated cells, possibly by promoting a cell cycle state compatible with centriole amplification and maturation. Acts downstream of MCIDAS to promote mother centriole amplification and maturation in preparation for apical docking.

Cellular Location

Cytoplasm. Nucleus, nucleolus Note=Localizes to the apical part of cytoplasm

Tissue Location

Present in respiratory cells (at protein level).

Cyclin O Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

Cyclin O Antibody - Images

Western blot analysis of Cyclin O in mouse bladder tissue lysate with Cyclin O antibody at (A) 1 and (B) 2 µg/mL.

Cyclin O Antibody - Background

Cyclin O Antibody: Cyclin O, also known as CCNO, has recently been identified as a Cdk1- and Cdk2-activating cyclin specific to apoptosis in lymphoid cells. Cyclin O binds to and activates Cdk2 in response to intrinsic apoptotic stimuli such as glucocorticoids or DNA-damaging agents. Suppression of Cyclin O expression by shRNA leads to the inhibition of glucocorticoid and DNA-damage-induced apoptosis due to a failure of apical caspase activation while leaving the CD95 death receptor-mediated apoptosis intact. Note: this gene, which had a previous symbol of UNG2, was erroneously identified as a uracil DNA glycosylase. A later publication identified this gene's product as a cyclin protein family member.
