

# PKR Antibody

Catalog # ASC10464

## Specification

## PKR Antibody - Product Information

Application Primary Accession Other Accession Reactivity Host Clonality Isotype Calculated MW

Application Notes

WB, IHC-P, IF, E <u>P19525</u> <u>AAP57628</u>, <u>5610</u> Human, Mouse, Rat Rabbit Polyclonal IgG Predicted: 56, 61 kDa

Observed: 72 kDa KDa PKR antibody can be used for detection of PKR by Western blot at  $0.5 - 2 \mu g/mL$ . Antibody can also be used for immunohistochemistry starting at 2.5  $\mu g/mL$ . For immunofluorescence start at 20  $\mu g/mL$ .

## PKR Antibody - Additional Information

Gene ID Other Names 5610

PKR Antibody: PKR, PRKR, EIF2AK1, PKR, Interferon-induced, double-stranded RNA-activated protein kinase, Eukaryotic translation initiation factor 2-alpha kinase 2, eIF-2A protein kinase 2, eukaryotic translation initiation factor 2-alpha kinase 2

## Target/Specificity

PKR antibody was raised against a peptide corresponding to 14 amino acids near the carboxy terminus of human PKR.<br><br>The immunogen is located within the last 50 amino acids of PKR.

## **Reconstitution & Storage**

PKR antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

## Precautions

PKR Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

## **PKR Antibody - Protein Information**

Name EIF2AK2

Synonyms PKR, PRKR

## Function

IFN-induced dsRNA-dependent serine/threonine-protein kinase that phosphorylates the alpha subunit of eukaryotic translation initiation factor 2 (EIF2S1/eIF-2-alpha) and plays a key role in the innate immune response to viral infection (PubMed:<a

href="http://www.uniprot.org/citations/18835251" target=" blank">18835251</a>, PubMed:<a href="http://www.uniprot.org/citations/19189853" target=" blank">19189853</a>, PubMed:<a href="http://www.uniprot.org/citations/19507191" target=" blank">19507191</a>, PubMed:<a href="http://www.uniprot.org/citations/21072047" target=" blank">21072047</a>, PubMed:<a href="http://www.uniprot.org/citations/21123651" target=" blank">21123651</a>, PubMed:<a href="http://www.uniprot.org/citations/22381929" target="\_blank">22381929</a>, PubMed:<a href="http://www.uniprot.org/citations/22948139" target="\_blank">22948139</a>, PubMed:<a href="http://www.uniprot.org/citations/23229543" target=" blank">23229543</a>). Inhibits viral replication via the integrated stress response (ISR): EIF2S1/eIF-2- alpha phosphorylation in response to viral infection converts EIF2S1/eIF-2-alpha in a global protein synthesis inhibitor, resulting to a shutdown of cellular and viral protein synthesis, while concomitantly initiating the preferential translation of ISR-specific mRNAs, such as the transcriptional activator ATF4 (PubMed:<a href="http://www.uniprot.org/citations/19189853" target="\_blank">19189853</a>, PubMed:<a href="http://www.uniprot.org/citations/21123651" target="\_blank">21123651</a>, PubMed:<a href="http://www.uniprot.org/citations/22948139" target="\_blank">22948139</a>, PubMed:<a href="http://www.uniprot.org/citations/23229543" target=" blank">23229543</a>). Exerts its antiviral activity on a wide range of DNA and RNA viruses including hepatitis C virus (HCV), hepatitis B virus (HBV), measles virus (MV) and herpes simplex virus 1 (HHV-1) (PubMed:<a href="http://www.uniprot.org/citations/11836380" target=" blank">11836380</a>, PubMed:<a href="http://www.uniprot.org/citations/19189853" target=" blank">19189853</a>, PubMed:<a href="http://www.uniprot.org/citations/19840259" target="\_blank">19840259</a>, PubMed:<a href="http://www.uniprot.org/citations/20171114" target=" blank">20171114</a>, PubMed:<a href="http://www.uniprot.org/citations/21710204" target=" blank">21710204</a>, PubMed:<a href="http://www.uniprot.org/citations/23115276" target=" blank">23115276</a>, PubMed:<a href="http://www.uniprot.org/citations/23399035" target=" blank">23399035</a>). Also involved in the regulation of signal transduction, apoptosis, cell proliferation and differentiation: phosphorylates other substrates including p53/TP53, PPP2R5A, DHX9, ILF3, IRS1 and the HHV-1 viral protein US11 (PubMed:<a href="http://www.uniprot.org/citations/11836380" target=" blank">11836380</a>, PubMed:<a href="http://www.uniprot.org/citations/19229320" target=" blank">19229320</a>, PubMed:<a href="http://www.uniprot.org/citations/22214662" target=" blank">22214662</a>). In addition to serine/threonine- protein kinase activity, also has tyrosine-protein kinase activity and phosphorylates CDK1 at 'Tyr-4' upon DNA damage, facilitating its ubiquitination and proteasomal degradation (PubMed: <a href="http://www.uniprot.org/citations/20395957" target=" blank">20395957</a>). Either as an adapter protein and/or via its kinase activity, can regulate various signaling pathways (p38 MAP kinase, NF-kappa-B and insulin signaling pathways) and transcription factors (JUN, STAT1, STAT3, IRF1, ATF3) involved in the expression of genes encoding pro-inflammatory cytokines and IFNs (PubMed:<a href="http://www.uniprot.org/citations/22948139" target=" blank">22948139</a>, PubMed:<a href="http://www.uniprot.org/citations/23084476" target=" blank">23084476</a>, PubMed:<a href="http://www.uniprot.org/citations/23372823" target="blank">23372823</a>). Activates the NF-kappa-B pathway via interaction with IKBKB and TRAF family of proteins and activates the p38 MAP kinase pathway via interaction with MAP2K6 (PubMed:<a href="http://www.uniprot.org/citations/10848580" target="\_blank">10848580</a>, PubMed:<a href="http://www.uniprot.org/citations/15121867" target=" blank">15121867</a>, PubMed:<a href="http://www.uniprot.org/citations/15229216" target=" blank">15229216</a>). Can act as both a positive and negative regulator of the insulin signaling pathway (ISP) (PubMed:<a href="http://www.uniprot.org/citations/20685959" target=" blank">20685959</a>). Negatively regulates ISP by inducing the inhibitory phosphorylation of insulin receptor substrate 1 (IRS1) at 'Ser-312' and positively regulates ISP via phosphorylation of PPP2R5A which activates FOXO1, which in turn up-regulates the expression of insulin receptor substrate 2 (IRS2) (PubMed:<a href="http://www.uniprot.org/citations/20685959" target=" blank">20685959</a>). Can regulate NLRP3 inflammasome assembly and the activation of NLRP3, NLRP1, AIM2 and NLRC4 inflammasomes (PubMed:<a href="http://www.uniprot.org/citations/22801494"

target="\_blank">22801494</a>). Plays a role in the regulation of the cytoskeleton by binding to gelsolin (GSN), sequestering the protein in an inactive conformation away from actin (By similarity).

#### **Cellular Location**

Cytoplasm. Nucleus. Cytoplasm, perinuclear region. Note=Nuclear localization is elevated in acute leukemia, myelodysplastic syndrome (MDS), melanoma, breast, colon, prostate and lung cancer patient samples or cell lines as well as neurocytes from advanced Creutzfeldt- Jakob disease patients.

#### **Tissue Location**

Highly expressed in thymus, spleen and bone marrow compared to non-hematopoietic tissues such as small intestine, liver, or kidney tissues. Colocalizes with GSK3B and TAU in the Alzheimer disease (AD) brain. Elevated levels seen in breast and colon carcinomas, and which correlates with tumor progression and invasiveness or risk of progression.

## **PKR Antibody - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- <u>Dot Blot</u>
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

PKR Antibody - Images

Immunohistochemistry of Clusterin in mouse brain tissue with Clusterin Antibodyat 5  $\mu$ g/mL.

## PKR Antibody - Background

PKR Antibody: The interferon-inducible, double-stranded RNA (dsRNA)-dependent protein kinase PKR is a member of the eukaryotic initiation factor-2 alpha (eIF2-alpha) kinase family, possessing serine-threonine kinase activity and two dsRNA-binding motifs that acts as part of the innate

immune system. Upon binding dsRNA, PKR undergoes a conformational change leading to its activation and its phosphorylation of the translation factor eIF2, resulting in a general shutdown of protein synthesis and induction of apoptosis through upregulation of caspase-8 and capsase-9 activity in order to prevent the production of more viruses. To evade the antiviral effects of PKR, viruses have evolved multiple mechanisms, such as the inhibition of PKR by the non-structural protein (NS1) of the influenza virus. More recently, PKR has been implicated in several neurodegenerative diseases including Alzheimer, Huntington, and amyotrophic lateral sclerosis.
