

CDNF Antibody
Catalog # ASC10588**Specification**

CDNF Antibody - Product Information

Application	WB, IHC-P, IF, E
Primary Accession	Q49AH0
Other Accession	Q49AH0 , 441549
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Application Notes	CDNF antibody can be used for detection of CDFN by Western blot at 2 - 4 µg/mL. Antibody can also be used for immunohistochemistry starting at 2.5 µg/mL. For immunofluorescence start at 20 µg/mL.

CDNF Antibody - Additional InformationGene ID **441549****Target/Specificity**

CDNF antibody was raised against a 9 amino acid synthetic peptide from near the carboxy terminus of human CDFN. The immunogen is located within the last 50 amino acids of CDFN.

Reconstitution & Storage

CDNF antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions

CDNF Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

CDNF Antibody - Protein Information**Name** CDFN**Synonyms** ARMETL1**Function**

Trophic factor for dopamine neurons. Prevents the 6- hydroxydopamine (6-OHDA)-induced degeneration of dopaminergic neurons. When administered after 6-OHDA-lesioning, restores the dopaminergic function and prevents the degeneration of dopaminergic neurons in substantia nigra (By similarity).

Cellular Location

Secreted

Tissue Location

Widely expressed in neuronal and non-neuronal tissues. In the brain, highest levels in the optic nerve and corpus callosum.

CDNF Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

CDNF Antibody - Images

Western blot analysis of CRMP1 in Caco-2 cell lysate with CRMP1 antibody at 0.5 µg/mL.

Western blot analysis of TIM-4 in RAW264.7 cell lysate with TIM-4 antibody at 2 μ g/mL in (A) the absence and (B) the presence of blocking peptide.

CDNF Antibody - Background

CDNF Antibody: The conserved dopamine neurotrophic factor (CDNF) is a neurotrophic factor for dopaminergic neurons and highly homologous to the mesencephalic-astrocyte-derived neuro-trophic factor. Somewhat surprisingly, CDCF is expressed at higher levels in tissues such as heart, skeletal muscle and testes than in brain. Similar to the glial cell line-derived neurotrophic factor (GDNF), CDFN can prevent the 6-hydroxylamine (6-OHDA)-induced degeneration of dopaminergic neurons in a rat model of Parkinson's disease. Furthermore, CDFN was able to restore the dopaminergic function and prevent the degeneration of dopaminergic neurons in the substantia nigra, suggesting that CDFN might be suitable for the treatment of Parkinson's disease. At least two isoforms of CDFN are known to exist.
