

SPG15 Antibody

Catalog # ASC10851

Specification

SPG15 Antibody - Product Information

Application Primary Accession Other Accession Reactivity Host Clonality Isotype Calculated MW

WB, IF, E <u>Q68DK2</u> <u>EAW80952</u>, <u>119601358</u> Human, Mouse, Rat Rabbit Polyclonal IgG Predicted: 280 kDa; Observed: 260 kDa KDa SPG15 antibody can be used for detection of SPG15 by Western blot at 1 - 2 μg/mL. For immunofluorescence start at 20 μg/mL.

Application Notes

SPG15 Antibody - Additional Information

Gene ID 23503 Target/Specificity ZFYVE26; Multiple isoforms of SPG15 are known to exist.

Reconstitution & Storage

SPG15 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions SPG15 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

SPG15 Antibody - Protein Information

Name ZFYVE26

Synonyms KIAA0321

Function

Phosphatidylinositol 3-phosphate-binding protein required for the abscission step in cytokinesis: recruited to the midbody during cytokinesis and acts as a regulator of abscission. May also be required for efficient homologous recombination DNA double-strand break repair.

Cellular Location

Cytoplasm, cytoskeleton, microtubule organizing center, centrosome. Midbody. Note=Localizes to the centrosome during all stages of the cell cycle. Recruited to the midbody during cytokinesis by KIF13A

Tissue Location

Strongest expression in the adrenal gland, bone marrow, adult brain, fetal brain, lung, placenta, prostate, skeletal muscle, testis, thymus, and retina. Intermediate levels are detected in other structures, including the spinal cord

SPG15 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

SPG15 Antibody - Images

Western blot analysis of SPG15 in K562 cell lysate with SPG15 antibody at (A) 1 and (B) 2 μ g/mL.

Immunofluorescence of SPG15 in Mouse Heart tissue with SPG15 antibody at 20 µg/mL.

SPG15 Antibody - Background

SPG15 Antibody: Hereditary spastic paraplegias (HSPs) are genetically and phenotypically heterogeneous disorders. Spastic paraplegia with thinning of the corpus callosum (ARHSP-TCC) is a relatively frequent form of complicated hereditary spastic paraplegia in which mental retardation and muscle stiffness at onset are followed by slowly progressive paraparesis and cognitive deterioration. SPG15 is the second gene known to be responsible for ARHSP-TCC in the Italian population. Mutations in this gene are associated with autosomal recessive spastic paraplegia-15. SPG15 encodes a protein containing a FYVE zinc finger binding domain which is thought to target these proteins to membrane lipids through interaction with phospholipids in the membrane. SPG15

mRNA is widely distributed in human tissues, as well as in rat embryos, suggesting a possible role for this protein during embryonic development. SPG15 co-localizes partially with endoplasmic reticulum and endosome markers, suggesting a role in intracellular trafficking.
