

Avian Influenza A H7N9 Hemagglutinin Antibody

Catalog # ASC11806

Specification

Avian Influenza A H7N9 Hemagglutinin Antibody - Product Information

Application

Primary Accession R4NN21

Other Accession <u>AGL44438</u>, <u>496493389</u>

Reactivity Virus
Host Rabbit
Clonality Polyclonal

lsotype IgG

Application Notes

Avian Influenza A H7N9 Hemagglutinin antibody can be used for detection of

Avian Influenza A H7N9 Hemagglutinin by

ELISA at 1 μg/ml.

Avian Influenza A H7N9 Hemagglutinin Antibody - Additional Information

Target/Specificity

HA; virus

Reconstitution & Storage

Avian Influenza A H7N9 Hemagglutinin antibody can be stored at 4°C for three months and -20°C, stable for up to one year.

Precautions

Avian Influenza A H7N9 Hemagglutinin Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Avian Influenza A H7N9 Hemagglutinin Antibody - Protein Information

Avian Influenza A H7N9 Hemagglutinin Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

Avian Influenza A H7N9 Hemagglutinin Antibody - Background

Influenza A virus is a major public health threat, killing more than 30,000 people per year in the USA (1). Novel influenza virus strains caused by genetic drift and viral recombination emerge periodically to which humans have little or no immunity, resulting in devastating pandemics. Influenza A can exist in a variety of animals; however it is in birds that all subtypes can be found (2). These subtypes are classified based on the combination of the virus coat glycoproteins hemagglutinin (HA) and neuraminidase (NA) subtypes. H7N9 bird flu is the newest atypical influenza virus infection that has just been reported since early 2013. The emergence of this new strain occurred in China and has become the present focus for possible worldwide pandemic (3).
