RLN3 Antibody
Catalog # ASC11924

Specification

RLN3 Antibody - Product Information

Application	**WB, IF**
Primary Accession	**Q8WFX3**
Other Accession	**NP_543140, 18254464**
Reactivity	**Human**
Host	**Rabbit**
Clonality	**Polyclonal**
Isotype	**IgG**
Calculated MW	**Predicted: 16 kDa; Observed: 20 kDa KDa**
Application Notes	**RLN3 antibody can be used for detection of RLN3 by Western blot at 1 - 2 µg/ml. For immunofluorescence start at 20 µg/mL.**

RLN3 Antibody - Additional Information

Gene ID	**117579**

Target/Specificity
RLN3; RLN3 antibody is human specific. RLN3 antibody is predicted to not cross-react with other members of the Relaxin protein family.

Reconstitution & Storage
RLN3 antibody can be stored at 4℃ for three months and -20℃, stable for up to one year.

Precautions
RLN3 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

RLN3 Antibody - Protein Information

Name mt-cyb

Synonyms cob, cytb, mtcyb

Function
Component of the ubiquinol-cytochrome c reductase complex (complex III or cytochrome b-c1 complex) that is part of the mitochondrial respiratory chain. The b-c1 complex mediates electron transfer from ubiquinol to cytochrome c. Contributes to the generation of a proton gradient across the mitochondrial membrane that is then used for ATP synthesis.
Cellular Location
Mitochondrion inner membrane {ECO:0000250|UniProtKB:P00157}; Multi-pass membrane protein {ECO:0000250|UniProtKB:P00157}
RLN3 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

RLN3 Antibody - Images

Western blot analysis of RLN3 in human brain tissue lysate with RLN3 antibody at (A) 1 and (B) 2 µg/ml.

Immunofluorescence of RLN3 in human brain tissue with RLN3 antibody at 20 µg/mL.

RLN3 Antibody - Background

Relaxin-3 (RLN3) is a member of Relaxin family, a group of endocrine and autocrine/paracrine hormones that belong to the insulin gene superfamily (1,2). RLN3 can bind to and activate three relaxin-family peptide receptors: RXFP1, RXFP3, and RXFP4 (3). In contrast to the widespread expression of the related proteins RLN1 and RLN2, RLN3 is predominantly expressed in brain and to

a lesser extent in the thymus, kidney and spleen (1). RLN3 has been suggested to play a role in feeding, metabolism, stress, arousal, learning, and memory (4).
