PUMA Antibody [2A9G5]

Catalog # ASC11980

Specification

PUMA Antibody [2A9G5] - Product Information

Application	**WB, E**
Primary Accession	Q9BXH1
Other Accession	Q9BXH1, 56748610
Reactivity	**Human, Mouse, Rat**
Host	**Mouse**
Clonality	**Monoclonal**
Isotype	**IgG1**
Application Notes	**PUMA antibody can be used for detection of PUMA by Western blot at 2.5 to 5 µg/mL.**

PUMA Antibody [2A9G5] - Additional Information

Gene ID	**27113**

Target/Specificity
BBC3;

Reconstitution & Storage
PUMA monoclonal antibody can be stored at -20℃, stable for one year.

Precautions
PUMA Antibody [2A9G5] is for research use only and not for use in diagnostic or therapeutic procedures.

PUMA Antibody [2A9G5] - Protein Information

Name BBC3

Synonyms PUMA

Function
Essential mediator of p53/TP53-dependent and p53/TP53- independent apoptosis (PubMed:11463391, PubMed:23340338). Promotes partial unfolding of BCL2L1 and dissociation of BCL2L1 from p53/TP53, releasing the bound p53/TP53 to induce apoptosis (PubMed:23340338). Regulates ER stress-induced neuronal apoptosis (By similarity).

Cellular Location
Mitochondrion Note=Localized to the mitochondria in order to induce cytochrome c release

Tissue Location
Ubiquitously expressed.

10320 Camino Santa Fe, Suite G
San Diego, CA 92121

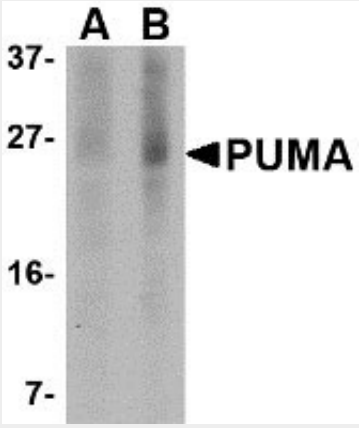
PUMA Antibody [2A9G5] - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

PUMA Antibody [2A9G5] - Images



Western blot analysis of PUMA expression in K562 cell lysate with PUMA antibody at (A) 2.5 and (B) 5 µg/mL.

PUMA Antibody [2A9G5] - Background

PUMA Monoclonal Antibody: Apoptosis is related to many diseases and development. The p53 tumor-suppressor protein induces apoptosis through transcriptional activation of several genes. A novel p53 inducible pro-apoptotic gene was identified recently and designated PUMA (for p53 upregulated modulator of apoptosis) and bbc3 (for Bcl-2 binding component 3) in human and mouse. PUMA/bbc3 is one of the pro-apoptotic Bcl-2 family members including Bax and Noxa, which are also transcriptional targets of p53. The PUMA gene encodes two BH3 domain-containing proteins termed PUMAα and PUMAβ. PUMA proteins bind Bcl-2, localize to the mitochondria, and induce cytochrome c release and apoptosis in response to p53. PUMA may be a direct mediator of p53-induced apoptosis.
