

DDDDK Antibody [1D1B12] (biotin)

Catalog # ASC12045

Specification

DDDDK Antibody [1D1B12] (biotin) - Product Information

Application WB, E
Primary Accession P60709
Other Accession 60
Host Mouse
Clonality Monoclonal
Isotype IgG

Calculated MW 41737

Application Notes Biotin-DDDDK antibody can be used for

detection of DDDDK by Western blot at 0.5

- 1 μ /ml.

DDDDK Antibody [1D1B12] (biotin) - Additional Information

Gene ID 60

Other Names

Biotin-DDDDK, DDDDK, FLAG, FLAGtag, flag-tag

Precautions

DDDDK Antibody [1D1B12] (biotin) is for research use only and not for use in diagnostic or therapeutic procedures.

DDDDK Antibody [1D1B12] (biotin) - Protein Information

Name ACTB

Function

Actin is a highly conserved protein that polymerizes to produce filaments that form cross-linked networks in the cytoplasm of cells (PubMed:25255767, PubMed:29581253). Actin exists in both monomeric (G-actin) and polymeric (F-actin) forms, both forms playing key functions, such as cell motility and contraction (PubMed: 29581253). In addition to their role in the cytoplasmic cytoskeleton, G- and F- actin also localize in the nucleus, and regulate gene transcription and motility and repair of damaged DNA (PubMed:29925947). Plays a role in the assembly of the gamma-tubulin ring complex (gTuRC), which regulates the minus-end nucleation of alpha-beta tubulin heterodimers that grow into microtubule protafilaments (PubMed:39321809, $PubMed: 38609661).$ Part of the ACTR1A/ACTB filament around which the dynactin complex is built (By similarity). The dynactin multiprotein complex activates the molecular motor dynein for ultra-processive transport along microtubules (By similarity).

Cellular Location

Cytoplasm, cytoskeleton. Nucleus Note=Localized in cytoplasmic mRNP granules containing untranslated mRNAs.

DDDDK Antibody [1D1B12] (biotin) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

DDDDK Antibody [1D1B12] (biotin) - Images

Western blot analysis of (1) 1000ng, (2) 500ng, (3) 250ng, and (4) 125ng of DDDDK-tagged recombinant protein (GGP1) with Biotin-DDDDK-tag antibody at 0.5 μ g/ml.

DDDDK Antibody [1D1B12] (biotin) - Background

Epitope tags provide a method to localize gene products in a variety of cell types, study the topology of proteins and protein complexes, identify associated proteins, and characterize newly identified, low abundance or poorly immunogenic proteins when protein specific antibodies are not available. DDDDK-tag is one of the more popular epitope tags for expressed recombinant proteins.
