

## Alpha-tubulin Antibody (biotin)

Catalog # ASC12066

## **Specification**

# Alpha-tubulin Antibody (biotin) - Product Information

Application WB, E
Primary Accession Q71U36

Other Accession <u>37492</u>, <u>CAA25855</u>, <u>7846</u>

Reactivity Human, Mouse, Rat, Rabbit, Zebrafish,

Chicken

Host Rabbit Clonality Polyclonal

Isotype IgG
Calculated MW 50136

Application Notes Biotin-Alpha-tubulin antibody can be used

for detection of alpha-tubulin by Western

blot at  $1 - 2 \mu g/ml$ .

# Alpha-tubulin Antibody (biotin) - Additional Information

Gene ID **7846** 

**Other Names** 

Tubulin alpha-1A, TUBA1A, TUBA3, LIS3

### **Precautions**

Alpha-tubulin Antibody (biotin) is for research use only and not for use in diagnostic or therapeutic procedures.

### Alpha-tubulin Antibody (biotin) - Protein Information

### Name TUBA1A

**Synonyms** TUBA3

#### **Function**

Tubulin is the major constituent of microtubules, a cylinder consisting of laterally associated linear protofilaments composed of alpha- and beta-tubulin heterodimers. Microtubules grow by the addition of GTP-tubulin dimers to the microtubule end, where a stabilizing cap forms. Below the cap, tubulin dimers are in GDP-bound state, owing to GTPase activity of alpha-tubulin.

### **Cellular Location**

Cytoplasm, cytoskeleton. Cytoplasm, cytoskeleton, flagellum axoneme {ECO:0000250|UniProtKB:P68369}

# **Tissue Location**

Expressed at a high level in fetal brain.

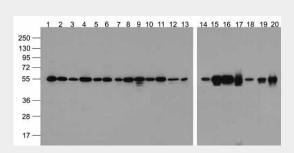

## Alpha-tubulin Antibody (biotin) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

## Alpha-tubulin Antibody (biotin) - Images

Western blot analysis of Alpha-tubulin in multiple cell and tissue lysates with Biotin-Alpha-tubulin antibody at 1  $\mu$ g/ml. Lanes 1-20: 293, A431, A549, Daudi, HeLa, HepG2, Jurkat, K562, MOLT, 3T3, Raji, THP-1, U937, human brain, mouse brain, rat brain, rabbit brain, mouse lung, chicken small intestine, and zebrafish lysate, respectively.

### Alpha-tubulin Antibody (biotin) - Background

Alpha-tubulin belongs to the tubulin superfamily, which is composed of six distinct families. Along with beta-tubulins, alpha-tubulins are the major components of microtubules. These microtubules are involved in a wide variety of cellular activities ranging from mitosis and transport events to cell movement and the maintenance of cell shape. Alpha- and beta-tubulin dimers are assembled to 13 protofilaments that form a microtubule of 22-nm diameter (reviewed in 1). Tyrosine ligase adds a C-terminal tyrosine to monomeric alpha-tubulin. Assembled microtubules can again be detyrosinated by a cytoskeleton-associated carboxypeptidase (2). Another post-translational modification of detyrosinated alpha-tubulin is C-terminal polyglutamylation, which is characteristic of microtubules in neuronal cells and the mitotic spindle (3). Like GAPDH and  $\Box$ -Actin, this antibody makes an excellent loading control in immunoblots.
