Beclin 1 Antibody - Background

Beclin 1 is the mammalian ortholog of the yeast autophagy -related gene Atg6. It regulates autophagy and has an important role in development, tumorigenesis and neurodegeneration (1). Beclin 1 is localized within cytoplasmic structures including the mitochondria, yet overexpression reveals some nuclear staining (2). Researchers have found that schizonphrenia is associated with low levels of Beclin-1 in the hippocampus (3). It may also protect against infection by a neuorvirulent strain of Sindbis virus (4).
