

Mouse IgG2b isotype control Rhodamine

Monoclonal M2B IgG2b , Rhodamine (TRITC) Catalog # ASR1107

Specification

Clonality

Mouse IgG2b isotype control Rhodamine - Product Information

Description MOUSE IgG2b isotype control Rhodamine

conjugated

Conjugate Rhodamine (TRITC)

FP Value 2.2 moles Rhodamine (TRITC) per mole of

Mouse IgG2b Monoclonal

Application ,4,

Application Note FlowCytometry 1:1000-1:5000
Physical State Lyophilized

Host Isotype IgG2b

Buffer 0.02 M Potassium Phosphate, 0.15 M

Sodium Chloride, pH 7.2

Species of Origin Mouse Reconstitution Volume 100 μ L

Reconstitution Buffer Restore with deionized water (or

equivalent)

Stabilizer 10 mg/mL Bovine Serum Albumin (BSA) -

Immunoglobulin and Protease free

Preservative 0.01% (w/v) Sodium Azide

Mouse IgG2b isotype control Rhodamine - Additional Information

Shipping Condition

Ambient

Purity

This product was prepared from normal serum by delipidation, salt fractionation, ion exchange chromatography followed by extensive dialysis against the buffer stated above. Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-Mouse IgG2b and anti-Mouse Serum.

Storage Condition

Store vial at 4° C prior to restoration. For extended storage aliquot contents and freeze at -20° C or below. Avoid cycles of freezing and thawing. Centrifuge product if not completely clear after standing at room temperature. This product is stable for several weeks at 4° C as an undiluted liquid. Dilute only prior to immediate use.

Precautions Note

This product is for research use only and is not intended for therapeutic or diagnostic applications.

Mouse IgG2b isotype control Rhodamine - Protein Information

Mouse IgG2b isotype control Rhodamine - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

Mouse IgG2b isotype control Rhodamine - Background

Isotype controls are important for Flow Cytometry and have no specificity for target cells within a particular experiment. Their purpose is to confirm the specificity of primary antibody binding that it is not a result of non-specific Fc receptor binding to cells or other cellular protein interactions. Isotype controls need to be matched to the specific primary Abs (species and isotype, including heavy and light chains) being used.
