## Anti-Mouse IgG (gamma 1, 2a, 2b and 3 chain) (Rhodamine Conjugated) Secondary Antibody - Product Information

Description Anti-MOUSE IgG (gamma 1, 2a, 2b and 3

chain) (RABBIT) Antibody Rhodamine

**Conjugated Rabbit** 

Host Rabbit Conjugate Rhodamine (TRITC)

FP Value 3.1 moles Rhodamine (TRITC) per mole of

IgG Mous

Target Species Mouse
Clonality Polyclonal
Application WB, IF, FC, IC

Application Note FLISA 1:20,000-1:100,000;IF Microscopy

proteins

Reconstitution Volume 1.0 mL

Reconstitution Buffer Restore with deionized water (or

equivalent)

Stabilizer 10 mg/mL Bovine Serum Albumin (BSA) -

Immunoglobulin and Protease free

Preservative 0.01% (w/v) Sodium Azide

## Anti-Mouse IgG (gamma 1, 2a, 2b and 3 chain) (Rhodamine Conjugated) Secondary Antibody - Additional Information

### **Shipping Condition Ambient**

#### **Purity**

Anti-Mouse IgG subclass pan reactive Secondary Antibody was prepared from monospecific antiserum by immunoaffinity chromatography using antigens coupled to agarose beads followed by solid phase adsorption(s) to remove any unwanted reactivities. This product shows balanced reactivity to Mouse IgG1, IgG2a, IgG2b and IgG3 proteins and is suitable to screen IgG class hybridoma clones. Minimal cross reactivity is observed against other Mouse immunoglobulin

classes or light chain proteins.

### **Storage Condition**

Store vial at 4° C prior to restoration. For extended storage aliquot contents and freeze at -20° C or below. Avoid cycles of freezing and thawing. Centrifuge product if not completely clear after standing at room temperature. This product is stable for several weeks at 4° C as an undiluted liquid. Dilute only prior to immediate use.

### **Precautions Note**

This product is for research use only and is not intended for therapeutic or diagnostic applications.

Rhodamine Conjugated Secondary Antibodies are ideal for immunofluorescence microscopy, fluorescence based plate assays (FLISA) and fluorescent western blotting and are available in a variety of formats and conjugate types. When choosing a secondary antibody, consideration must be given to species and immunoglobulin specificity, conjugate type, fragment and chain specificity, level of cross-reactivity, and host-species source and fragment composition.
