

## RAT IgG2a isotype control Phycoerythrin

Monoclonal IgG2a , R-Phycoerythrin (RPE) Catalog # ASR3299

### Specification

# **RAT IgG2a isotype control Phycoerythrin - Product Information**

Description

Conjugate FP Value

Clonality Application Application Note

Physical State Host Isotype Species of Origin Stabilizer Preservative RAT IgG2a isotype control Phycoerythrin conjugated R-Phycoerythrin (RPE) 1-2 moles R-Phycoerythrin (RPE) per mole of Rat IgG2a Monoclonal ,4,10, ELISA 1:2000-1:20,000;FlowCytometry 1:1000-1:5000 Liquid (sterile filtered) IgG2a Rat None 0.01% (w/v) Sodium Azide

## RAT IgG2a isotype control Phycoerythrin - Additional Information

Shipping Condition Wet Ice

#### Purity

RAT IgG2a isotype control has been prepared from concentrated cell culture supernatant by immunoaffinity chromatography using protein G. In an Ouchterlony double diffusion assay the material is non-reactive with antisera to rat IgG1, IgG2b, IgG3, IgM, and IgA. Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-Rat IgG and anti-Rat serum. Light and heavy chain composition has been confirmed.

Storage Condition

Store vial at 4° C prior to opening. Dilute only prior to immediate use. This product is stable at 4° C as an undiluted liquid. DO NOT FREEZE. Store reagent in the dark. Use subdued lighting during handling and incubation of cells prior to analysis.

**Precautions Note** This product is for research use only and is not intended for therapeutic or diagnostic applications.

# **RAT IgG2a isotype control Phycoerythrin - Protein Information**

### **RAT IgG2a isotype control Phycoerythrin - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- <u>Blocking Peptides</u>
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

## RAT IgG2a isotype control Phycoerythrin - Background

RAT IgG2a isotype control is used in flow cytometry, western blot and ELISA and differentiate between immunoglobulin classes and subclasses. Isotype controls allow for the genetic variations or differences in the constant regions of the heavy and light chains. In Rat there are six relevant heavy chain isotypes and two light chain isotypes: heavy chain a - IgA, ? - IgG 1, 2a, 2b, 2c and  $\mu$  - IgM, light chain ? and ?.
