

HAMSTER IgG (BULK ORDER)

Catalog # ASR3571

### Specification

## HAMSTER IgG (BULK ORDER) - Product Information

Description

Conjugate Physical State Host Isotype Buffer

Species of Origin Reconstitution Volume Reconstitution Buffer

Preservative

HAMSTER IgG whole molecule (BULK ORDER) Unconjugated Lyophilized IgG 0.02 M Potassium Phosphate, 0.15 M Sodium Chloride, pH 7.2 Golden Syrian Hamster 1.0 mL Restore with deionized water (or equivalent) 0.01% (w/v) Sodium Azide

# HAMSTER IgG (BULK ORDER) - Additional Information

Shipping Condition Ambient

#### **Purity**

Hamster IgG whole molecule was prepared from normal serum by a multi-step process which includes delipidation, salt fractionation and ion exchange chromatography followed by extensive dialysis against the buffer stated above. Hamster IgG whole molecule was assayed by immunoelectrophoresis resulted in a single precipitin arc against anti-GS Hamster IgG and anti-GS Hamster Serum.

#### Storage Condition

Store vial at 4° C prior to restoration. For extended storage aliquot contents and freeze at -20° C or below. Avoid cycles of freezing and thawing. Centrifuge product if not completely clear after standing at room temperature. Hamster IgG whole molecule is stable for several weeks at 4° C as an undiluted liquid. Dilute only prior to immediate use.

#### **Precautions Note**

This product is for research use only and is not intended for therapeutic or diagnostic applications.

# HAMSTER IgG (BULK ORDER) - Protein Information

## HAMSTER IgG (BULK ORDER) - Protocols

Provided below are standard protocols that you may find useful for product applications.

<u>Western Blot</u>

- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

# HAMSTER IgG (BULK ORDER) - Background

Secreted as part of the adaptive immune response by plasma B cells, Hamster immunoglobulin G constitutes 75% of serum immunoglobulins. Immunoglobulin G binds to viruses, bacteria, as well as fungi and facilitates their destruction or neutralization via agglutination (and thereby immobilizing them), activation of the compliment cascade, and opsinization for phagocytosis. The whole IgG molecule possesses both the F(c) region, recognized by high-afinity Fc receptor proteins, as well as the F(ab) region possessing the epitope-recognition site. Both heavy and light chains of the antibody molecule are present.
