Clonality
Application

Unconjugated
Human
Human
Monoclonal
WB, E, IP, I, LCI

Application Note

This product was tested by immunoblot and found to be reactive against p300 at a

dilution of 1:10 to 1:50 followed by reaction with Peroxidase conjugated Affinity Purified anti-Mouse IgG [H&L] (Goat) code #610-1302. Anti-p300 is suitable for the detection by immunoblot of human p300. Partial reaction was observed against the CREB binding Protein (CBP). This product was also tested by immunoprecipitation and found to be reactive using 50 µl per assay. This

antibody is suitable for EMSA.

Physical State Liquid (sterile filtered)

p300 peptide corresponding to a region near the N-terminus of the human protein conjugated to Keyhole Limpet Hemocyanin

(KLH).

Preservative 0.01% (w/v) Sodium Azide

Anti-Human p300 Transcription Factor (MOUSE) Monoclonal Antibody - Additional Information

Gene ID 2033

Immunogen

Other Names 2033

Purity

This product was prepared from tissue culture supernatant.

Storage Condition

Store vial at -20° C prior to opening. Aliquot contents and freeze at -20° C or below for extended storage. Avoid cycles of freezing and thawing. Centrifuge product if not completely clear after standing at room temperature. This product is stable for several weeks at 4° C as an undiluted liquid. Dilute only prior to immediate use.

Precautions Note

This product is for research use only and is not intended for therapeutic or diagnostic applications.

Anti-Human p300 Transcription Factor (MOUSE) Monoclonal Antibody - Protein Information

Name EP300 {ECO:0000303|PubMed:15706485, ECO:0000312|HGNC:HGNC:3373}

Function

```
Functions as a histone acetyltransferase and regulates transcription via chromatin remodeling
(PubMed:<a href="http://www.uniprot.org/citations/23415232" target=" blank">23415232</a>,
PubMed:<a href="http://www.uniprot.org/citations/23934153" target=" blank">23934153</a>,
PubMed:<a href="http://www.uniprot.org/citations/8945521" target=" blank">8945521</a>).
Acetylates all four core histones in nucleosomes (PubMed:<a
href="http://www.uniprot.org/citations/23415232" target=" blank">23415232</a>, PubMed:<a
href="http://www.uniprot.org/citations/23934153" target="blank">23934153</a>, PubMed:<a
href="http://www.uniprot.org/citations/8945521" target=" blank">8945521</a>). Histone
acetylation gives an epigenetic tag for transcriptional activation (PubMed:<a
href="http://www.uniprot.org/citations/23415232" target=" blank">23415232</a>, PubMed:<a
href="http://www.uniprot.org/citations/23934153" target=" blank">23934153</a>, PubMed:<a
href="http://www.uniprot.org/citations/8945521" target="_blank">8945521</a>). Mediates
acetylation of histone H3 at 'Lys-122' (H3K122ac), a modification that localizes at the surface of
the histone octamer and stimulates transcription, possibly by promoting nucleosome instability
(PubMed:<a href="http://www.uniprot.org/citations/23415232" target=" blank">23415232</a>).
Mediates acetylation of histone H3 at 'Lys-18' and 'Lys-27' (H3K18ac and H3K27ac, respectively)
(PubMed:<a href="http://www.uniprot.org/citations/21131905" target="_blank">21131905</a>, PubMed:<a href="http://www.uniprot.org/citations/23911289" target="_blank">23911289</a>).
Also able to acetylate histone lysine residues that are already monomethylated on the same side
chain to form N6-acetyl-N6- methyllysine (Kacme), an epigenetic mark of active chromatin
associated with increased transcriptional initiation (PubMed: <a
href="http://www.uniprot.org/citations/37731000" target=" blank">37731000</a>). Catalyzes
formation of histone H4 acetyl-methylated at 'Lys-5' and 'Lys-12' (H4K5acme and H4K12acme,
respectively) (PubMed:<a href="http://www.uniprot.org/citations/37731000"
target=" blank">37731000</a>). Also functions as acetyltransferase for non-histone targets,
such as ALX1, HDAC1, PRMT1, SIRT2, STAT3 or GLUL (PubMed:<a
href="http://www.uniprot.org/citations/12929931" target="_blank">12929931</a>, PubMed:<a
href="http://www.uniprot.org/citations/15653507" target=" blank">15653507</a>, PubMed:<a
href="http://www.uniprot.org/citations/16285960" target="blank">16285960</a>, PubMed:<a
href="http://www.uniprot.org/citations/16762839" target="_blank">16762839</a>, PubMed:<a
href="http://www.uniprot.org/citations/18722353" target="blank">18722353</a>, PubMed:<a
href="http://www.uniprot.org/citations/18782771" target="blank">18782771</a>, PubMed:<a
href="http://www.uniprot.org/citations/26990986" target="_blank">26990986</a>). Acetylates
'Lys-131' of ALX1 and acts as its coactivator (PubMed: <a
href="http://www.uniprot.org/citations/12929931" target=" blank">12929931</a>). Acetylates
SIRT2 and is proposed to indirectly increase the transcriptional activity of p53/TP53 through
acetylation and subsequent attenuation of SIRT2 deacetylase function (PubMed:<a
href="http://www.uniprot.org/citations/18722353" target=" blank">18722353</a>). Following
DNA damage, forms a stress-responsive p53/TP53 coactivator complex with JMY which mediates
p53/TP53 acetylation, thereby increasing p53/TP53-dependent transcription and apoptosis
(PubMed:<a href="http://www.uniprot.org/citations/11511361" target="_blank">11511361</a>,
PubMed:<a href="http://www.uniprot.org/citations/15448695" target=" blank">15448695</a>).
Promotes chromatin acetylation in heat shock responsive HSP genes during the heat shock
response (HSR), thereby stimulating HSR transcription (PubMed: <a
href="http://www.uniprot.org/citations/18451878" target=" blank">18451878</a>). Acetylates
HDAC1 leading to its inactivation and modulation of transcription (PubMed: <a
```

href="http://www.uniprot.org/citations/16762839" target=" blank">16762839). Acetylates 'Lys-247' of EGR2 (By similarity). Acts as a TFAP2A-mediated transcriptional coactivator in presence of CITED2 (PubMed:12586840). Plays a role as a coactivator of NEUROD1-dependent transcription of the secretin and p21 genes and controls terminal differentiation of cells in the intestinal epithelium. Promotes cardiac myocyte enlargement (PubMed: 14752053). Can also mediate transcriptional repression. Acetylates FOXO1 and enhances its transcriptional activity (PubMed:15890677). Acetylates STAT3 at different sites, promoting both STAT3 dimerization and activation and recruitment to chromatin (PubMed:15653507, PubMed:16285960, PubMed:18782771). Acetylates BCL6 which disrupts its ability to recruit histone deacetylases and hinders its transcriptional repressor activity (PubMed:12402037). Participates in CLOCK or NPAS2-regulated rhythmic gene transcription; exhibits a circadian association with CLOCK or NPAS2, correlating with increase in PER1/2 mRNA and histone H3 acetylation on the PER1/2 promoter (PubMed:14645221). Acetylates MTA1 at 'Lys-626' which is essential for its transcriptional coactivator activity (PubMed: 16617102). Acetylates XBP1 isoform 2; acetylation increases protein stability of XBP1 isoform 2 and enhances its transcriptional activity (PubMed: 20955178). Acetylates PCNA; acetylation promotes removal of chromatin-bound PCNA and its degradation during nucleotide excision repair (NER) (PubMed:24939902). Acetylates MEF2D (PubMed:21030595). Acetylates and stabilizes ZBTB7B protein by antagonizing ubiquitin conjugation and degradation, this mechanism may be involved in CD4/CD8 lineage differentiation (PubMed: 20810990). Acetylates GABPB1, impairing GABPB1 heterotetramerization and activity (By similarity). Acetylates PCK1 and promotes PCK1 anaplerotic activity (PubMed:30193097). Acetylates RXRA and RXRG (PubMed:17761950). Acetylates isoform M2 of PKM (PKM2), promoting its homodimerization and conversion into a protein kinase (PubMed:24120661). Acetylates RPTOR in response to leucine, leading to activation of the mTORC1 complex (PubMed:30197302, PubMed:32561715). Acetylates RICTOR, leading to activation of the mTORC2 complex (PubMed: 22084251). Mediates cAMP-gene regulation by binding specifically to phosphorylated CREBBP (PubMed: 8917528). In addition to protein acetyltransferase, can use different acyl-CoA substrates, such as (2E)-butenoyl-CoA (crotonyl-CoA), butanoyl-CoA (butyryl-CoA), 2- hydroxyisobutanoyl-CoA (2-hydroxyisobutyryl-CoA), lactoyl-CoA or propanoyl-CoA (propionyl-CoA), and is able to mediate protein crotonylation, butyrylation, 2-hydroxyisobutyrylation, lactylation or propionylation, respectively (PubMed: 17267393, PubMed:25818647, PubMed:29775581, PubMed:31645732). Acts as a histone crotonyltransferase; crotonylation marks active promoters and enhancers and confers resistance to transcriptional repressors (PubMed:25818647). Histone crotonyltransferase activity is dependent on the concentration of (2E)-butenoyl-CoA (crotonyl-CoA)

substrate and such activity is weak when (2E)-butenoyl-CoA (crotonyl-CoA) concentration is low

Tel: 858.875.1900 Fax: 858.875.1999

(PubMed:25818647). Also acts as a histone butyryltransferase; butyrylation marks active promoters (PubMed: 17267393). Catalyzes histone lactylation in macrophages by using lactoyl-CoA directly derived from endogenous or exogenous lactate, leading to stimulates gene transcription (PubMed:31645732). Acts as a protein-lysine 2- hydroxyisobutyryltransferase; regulates glycolysis by mediating 2hydroxyisobutyrylation of glycolytic enzymes (PubMed: 29775581). Functions as a transcriptional coactivator for SMAD4 in the TGF-beta signaling pathway (PubMed:25514493).

Cellular Location

Cytoplasm, Nucleus, Chromosome Note=Localizes to active chromatin: Colocalizes with histone H3 acetylated and/or crotonylated at 'Lys-18' (H3K18ac and H3K18cr, respectively) (PubMed:25818647). In the presence of ALX1 relocalizes from the cytoplasm to the nucleus. Colocalizes with ROCK2 in the nucleus (PubMed:12929931). Localizes to sites of DNA damage (PubMed:25593309).

Anti-Human p300 Transcription Factor (MOUSE) Monoclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- <u>Immunofluorescence</u>
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

Anti-Human p300 Transcription Factor (MOUSE) Monoclonal Antibody - Background

Histone acetyltransferase p300 functions as histone acetyltransferase and regulates transcription via chromatin remodeling. Acetylates all four core histones in nucleosomes. Which gives an epigenetic tag for transcriptional activation. It mediates cAMP-gene regulation by binding specifically to phosphorylated CREB protein. It mediates acetylation of histone H3 at 'Lys-122' (H3K122ac), a modification that localizes at the surface of the histone octamer and stimulates transcription, possibly by promoting nucleosome instability and mediates acetylation of histone H3 at 'Lys-27' (H3K27ac). It also functions as acetyltransferase for nonhistone targets. It acetylates 'Lys-131' of ALX1 and acts as its coactivator. It acetylates SIRT2 and is proposed to indirectly increase the transcriptional activity of TP53 through acetylation and subsequent attenuation of SIRT2 deacetylase function.and acetylates HDAC1 leading to its inactivation and modulation of transcription. p300 acts as a TFAP2A-mediated transcriptional coactivator in presence of CITED2. It plays a role as a coactivator of NEUROD1-dependent transcription of the secretin and p21 genes and controls terminal differentiation of cells in the intestinal epithelium. It promotes cardiac myocyte enlargement and can also mediate transcriptional repression. It binds to and may be involved in the transforming capacity of the adenovirus E1A protein. In the case of HIV-1 infection, it is recruited by the viral protein Tat. p300 regulates Tat's transactivating activity and may help inducing chromatin remodeling of proviral genes. It acetylates FOXO1 and enhances its transcriptional activity. It acetylates BCL6 which disrupts its ability to recruit histone deacetylases and hinders its transcriptional repressor activity. It participates in CLOCK or NPAS2-regulated rhythmic gene transcription; exhibits a circadian association with CLOCK or NPAS2, correlating with

increase in PER1/2 mRNA and histone H3 acetylation on the PER1/2 promoter. It acetylates MTA1 at 'Lys-626' which is essential for its transcriptional coactivator activity.
