

Anti-Procalcitonin (MOUSE) Monoclonal Antibody

Procalcitonin (8G10.H3.C3.G4.E2.C8) Antibody Catalog # ASR4270

Specification

Anti-Procalcitonin (MOUSE) Monoclonal Antibody - Product Information

Host Mouse Balb/c Conjugate Unconjugated

Target Species
Reactivity
Human
Clonality
Monoclonal
Application
WB, E, I, LCI

Application Note Anti-Procalcitonin [8G10.H3] antibody was

tested by ELISA and Western Blot. Specific

conditions for reactivity should be

optimized by the end user. Liquid (sterile filtered)

Buffer 0.02 M Potassium Phosphate, 0.15 M

Sodium Chloride, pH 7.2

Immunogen Procalcitonin Antibody was produced in

mice prepared by repeated immunizations

with full-length recombinant human

Procalcitonin protein. 0.01% (w/v) Sodium Azide

Anti-Procalcitonin (MOUSE) Monoclonal Antibody - Additional Information

Gene ID 796

Preservative

Physical State

Purity

Anti-Procalcitonin Antibody was purified from concentrated tissue culture supernate by Protein A chromatography. This antibody is specific for human Procalcitonin. Cross-reactivity with Procalcitonin from other sources has not been determined.

Storage Condition

Store vial at -20° C prior to opening. Aliquot contents and freeze at -20° C or below for extended storage. Avoid cycles of freezing and thawing. Centrifuge product if not completely clear after standing at room temperature. This product is stable for several weeks at 4° C as an undiluted liquid. Dilute only prior to immediate use.

Precautions Note

This product is for research use only and is not intended for therapeutic or diagnostic applications.

Anti-Procalcitonin (MOUSE) Monoclonal Antibody - Protein Information

Name CALCA (HGNC:1437)

Synonyms CALC1

Function

CGRP1/CALCA is a peptide hormone that induces vasodilation mediated by the CALCRL-RAMP1 receptor complex (PubMed:1318039, PubMed:33602864, PubMed:9620797). Dilates a variety of vessels including the coronary, cerebral and systemic vasculature. Its abundance in the CNS also points toward a neurotransmitter or neuromodulator role (PubMed:3492492). It also elevates platelet cAMP (PubMed:1318039). CGRP1 can also bind and activate CALCR-RAMP1 (AMYR1) receptor complex (PubMed:38603770).

Cellular Location Secreted.

Tissue Location Expressed in spinal cord.

Anti-Procalcitonin (MOUSE) Monoclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

Anti-Procalcitonin (MOUSE) Monoclonal Antibody - Images

Anti-Procalcitonin (MOUSE) Monoclonal Antibody - Background

Anti-Procalcitonin antibody detects human Procalcitonin. Procalcitonin is a peptide hormone mainly produced by the C cells of the thyroid and certain endocrine cells of the lung. Under normal expression conditions, procalcitonin is immediately cleaved into three specific fragments, a N terminal residue, calcitonin and katacalcin. Levels of unprocessed procalcitonin rise significantly after bacterial infection, trauma or shock. This gene encodes the peptide hormones calcitonin, calcitonin gene-related peptide and katacalcin by tissue-specific alternative RNA splicing of the gene transcripts and cleavage of inactive precursor proteins. Calcitonin is involved in calcium regulation and acts to regulate phosphorus metabolism. Calcitonin gene-related peptide functions as a vasodilator while katacalcin is a calcium-lowering peptide. Multiple transcript variants encoding different isoforms have been found for this gene.
