

AF1Q Antibody (monoclonal) (M01)**Mouse monoclonal antibody raised against a full length recombinant AF1Q.****Catalog # AT1064a****Specification**

AF1Q Antibody (monoclonal) (M01) - Product Information

Application	WB, E
Primary Accession	Q13015
Other Accession	BC009624
Reactivity	Human
Host	mouse
Clonality	Monoclonal
Isotype	IgG2a kappa
Calculated MW	10061

AF1Q Antibody (monoclonal) (M01) - Additional Information**Gene ID** 10962**Other Names**

Protein AF1q, MLLT11, AF1Q

Target/Specificity

AF1Q (AAH09624, 1 a.a. ~ 90 a.a) full-length recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Dilution

WB~~1:500~1000

E~~N/A

Format

Clear, colorless solution in phosphate buffered saline, pH 7.2 .

Storage

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions

AF1Q Antibody (monoclonal) (M01) is for research use only and not for use in diagnostic or therapeutic procedures.

AF1Q Antibody (monoclonal) (M01) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Dot Blot](#)

- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

AF1Q Antibody (monoclonal) (M01) - Images

Antibody Reactive Against Recombinant Protein. Western Blot detection against Immunogen (35.64 kDa) .

Detection limit for recombinant GST tagged MLLT11 is approximately 0.03ng/ml as a capture antibody.

AF1Q Antibody (monoclonal) (M01) - Background

The gene variously symbolized ALL1, HRX, or MLL located on 11q23 has been demonstrated to be fused with a number of translocation partners in cases of leukemia. t(1;11)(q21;q23) translocations that fused the MLL gene to a gene on chromosomal band 1q21 in 2 infants with acute myelomonocytic leukemia have been demonstrated. The N-terminal portion of the MLL gene is critical for leukemogenesis in translocations involving band 11q23. This gene encodes 90 amino acids. It was found to be highly expressed in the thymus but not in peripheral lymphoid tissues. In contrast to its restricted distribution in normal hematopoietic tissue, this gene was expressed in all leukemic cell lines tested.
