

## **BOLL Antibody (monoclonal) (M09)**

Mouse monoclonal antibody raised against a partial recombinant BOLL. Catalog # AT1309a

## **Specification**

## **BOLL Antibody (monoclonal) (M09) - Product Information**

**Application** WB, E **08N9W6 Primary Accession** Other Accession NM 033030 Reactivity Human Host mouse Clonality **Monoclonal** Isotype IgG2a Kappa Calculated MW 31301

# **BOLL Antibody (monoclonal) (M09) - Additional Information**

#### Gene ID 66037

### **Other Names**

Protein boule-like, BOLL, BOULE

## Target/Specificity

BOLL (NP\_149019, 185 a.a.  $\sim$  283 a.a) partial recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

## **Dilution**

WB~~1:500~1000

E~~N/A

### **Format**

Clear, colorless solution in phosphate buffered saline, pH 7.2.

#### Storage

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

#### **Precautions**

BOLL Antibody (monoclonal) (M09) is for research use only and not for use in diagnostic or therapeutic procedures.

### **BOLL Antibody (monoclonal) (M09) - Protocols**

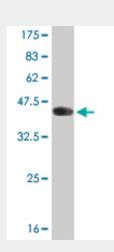

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot

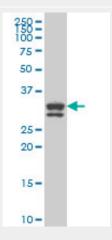

- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

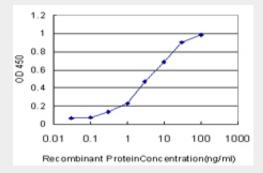

## **BOLL Antibody (monoclonal) (M09) - Images**

Antibody Reactive Against Recombinant Protein. Western Blot detection against Immunogen (36.63 KDa).

BOLL monoclonal antibody (M09), clone 1A7 Western Blot analysis of BOLL expression in Hela S3 NE ( (Cat # AT1309a )

Detection limit for recombinant GST tagged BOLL is approximately 0.3ng/ml as a capture antibody.

This gene belongs to the DAZ gene family required for germ cell development. It encodes an RNA-binding protein which is more similar to Drosophila Boule than to human proteins encoded by genes DAZ (deleted in azoospermia) or DAZL (deleted in azoospermia-like). Loss of this gene function results in the absence of sperm in semen (azoospermia). Histological studies demonstrated that the primary defect is at the meiotic G2/M transition. Two alternatively spliced transcript variants encoding distinct isoforms have been found for this gene.
