

COMT Antibody (monoclonal) (M01)**Mouse monoclonal antibody raised against a full length recombinant COMT.****Catalog # AT1588a****Specification**

COMT Antibody (monoclonal) (M01) - Product Information

Application	WB, E
Primary Accession	P21964
Other Accession	BC000419
Reactivity	Human
Host	mouse
Clonality	Monoclonal
Isotype	IgG2b kappa
Calculated MW	30037

COMT Antibody (monoclonal) (M01) - Additional Information**Gene ID** 1312**Other Names**

Catechol O-methyltransferase, COMT

Target/Specificity

COMT (AAH00419.2, 1 a.a. ~ 182 a.a) full-length recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Dilution

WB~~1:500~1000

E~~N/A

Format

Clear, colorless solution in phosphate buffered saline, pH 7.2 .

Storage

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions

COMT Antibody (monoclonal) (M01) is for research use only and not for use in diagnostic or therapeutic procedures.

COMT Antibody (monoclonal) (M01) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)

- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

COMT Antibody (monoclonal) (M01) - Images

Antibody Reactive Against Recombinant Protein. Western Blot detection against Immunogen (45.76 kDa) .

COMT monoclonal antibody (M01), clone 1G4-1A1 Western Blot analysis of COMT expression in A-431 ((Cat # AT1588a)

Western Blot analysis of COMT expression in transfected 293T cell line by COMT monoclonal antibody (M01), clone 1G4-1A1.

Lane 1: COMT transfected lysate(24.4 KDa).

Lane 2: Non-transfected lysate.

Detection limit for recombinant GST tagged COMT is 0.3 ng/ml as a capture antibody.

COMT Antibody (monoclonal) (M01) - Background

Catechol-O-methyltransferase catalyzes the transfer of a methyl group from S-adenosylmethionine to catecholamines, including the neurotransmitters dopamine, epinephrine, and norepinephrine. This O-methylation results in one of the major degradative pathways of the catecholamine transmitters. In addition to its role in the metabolism of endogenous substances, COMT is important in the metabolism of catechol drugs used in the treatment of hypertension, asthma, and Parkinson disease. COMT is found in two forms in tissues, a soluble form (S-COMT) and a membrane-bound form (MB-COMT). The differences between S-COMT and MB-COMT reside within the N-termini. Several transcript variants are formed through the use of alternative translation initiation sites and promoters.
