CREBBP Antibody (monoclonal) (M01)

Mouse monoclonal antibody raised against a partial recombinant CREBBP.
Catalog # AT1621a

Specification

CREBBP Antibody (monoclonal) (M01) - Product Information

Application	**WB, IF, E**
Primary Accession	Q92793
Other Accession	NM_004380
Reactivity	**Human**
Host	**mouse**
Clonality	**Monoclonal**
Isotype	**IgG1 kappa**
Calculated MW	**265351**

CREBBP Antibody (monoclonal) (M01) - Additional Information

Gene ID 1387

Other Names
CREB-binding protein, CREBBP, CBP

Target/Specificity
CREBBP (NP_004371, 951 a.a. ~ 1050 a.a) partial recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Dilution
WB~~1:500~1000
IF~~1:50~200
E~~N/A

Format
Clear, colorless solution in phosphate buffered saline, pH 7.2 .

Storage
Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions
CREBBP Antibody (monoclonal) (M01) is for research use only and not for use in diagnostic or therapeutic procedures.

CREBBP Antibody (monoclonal) (M01) - Protocols

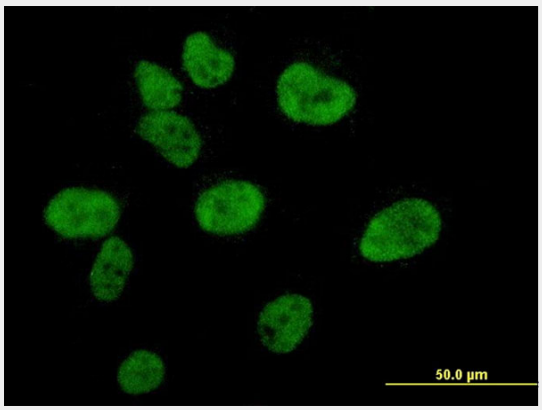
Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides

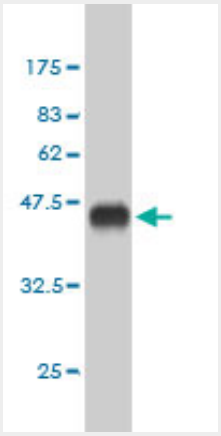
10320 Camino Santa Fe, Suite G
San Diego, CA 92121
Tel: 858.875.1900 Fax: 858.875.1999

- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

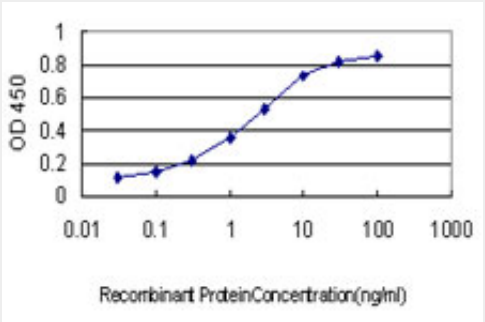
CREBBP Antibody (monoclonal) (M01) - Images



Immunofluorescence of monoclonal antibody to CREBBP on HeLa cell . [antibody concentration 10 ug/ml]



Antibody Reactive Against Recombinant Protein.Western Blot detection against Immunogen (36.74 KDa) .



Detection limit for recombinant GST tagged CREBBP is approximately 0.03ng/ml as a capture antibody.

10320 Camino Santa Fe, Suite G
San Diego, CA 92121

Proximity Ligation Analysis of protein-protein interactions between FGFR1 and CREBBP HeLa cells were stained with anti-FGFR1 rabbit purified polyclonal 1:1200 and anti-CREBBP mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex, and nuclei were counterstained with DAPI (blue).

CREBBP Antibody (monoclonal) (M01) - Background

This gene is ubiquitously expressed and is involved in the transcriptional coactivation of many different transcription factors. First isolated as a nuclear protein that binds to cAMP-response element binding protein (CREB), this gene is now known to play critical roles in embryonic development, growth control, and homeostasis by coupling chromatin remodeling to transcription factor recognition. The protein encoded by this gene has intrinsic histone acetyltransferase activity and also acts as a scaffold to stabilize additional protein interactions with the transcription complex. This protein acetylates both histone and non-histone proteins. This protein shares regions of very high sequence similarity with protein p300 in its bromodomain, cysteine-histidine-rich regions, and histone acetyltransferase domain. Mutations in this gene cause Rubinstein-Taybi syndrome (RTS). Chromosomal translocations involving this gene have been associated with acute myeloid leukemia. Alternative splicing results in multiple transcript variants encoding different isoforms.
