

**HAMP Antibody (monoclonal) (M02)****Mouse monoclonal antibody raised against a full length recombinant HAMP.****Catalog # AT2313a****Specification**

---

**HAMP Antibody (monoclonal) (M02) - Product Information**

Application	WB, E
Primary Accession	<a href="#">P81172</a>
Other Accession	<a href="#">BC020612</a>
Reactivity	Human
Host	Mouse
Clonality	Monoclonal
Isotype	IgG1 Kappa
Calculated MW	9408

**HAMP Antibody (monoclonal) (M02) - Additional Information****Gene ID** 57817**Other Names**

Hepcidin, Liver-expressed antimicrobial peptide 1, LEAP-1, Putative liver tumor regressor, PLTR, Hepcidin-25, Hepc25, Hepcidin-20, Hepc20, HAMP, HEPC, LEAP1

**Target/Specificity**

HAMP (AAH20612, 25 a.a. ~ 84 a.a) full-length recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

**Dilution**

WB~~1:500~1000

E~~N/A

**Format**

Clear, colorless solution in phosphate buffered saline, pH 7.2 .

**Storage**

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

**Precautions**

HAMP Antibody (monoclonal) (M02) is for research use only and not for use in diagnostic or therapeutic procedures.

**HAMP Antibody (monoclonal) (M02) - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)

- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

### HAMP Antibody (monoclonal) (M02) - Images

Antibody Reactive Against Recombinant Protein. Western Blot detection against Immunogen (32.34 KDa) .

Detection limit for recombinant GST tagged HAMP is approximately 0.03ng/ml as a capture antibody.

### HAMP Antibody (monoclonal) (M02) - Background

The product encoded by this gene is involved in the maintenance of iron homeostasis, and it is necessary for the regulation of iron storage in macrophages, and for intestinal iron absorption. The preproprotein is post-translationally cleaved into mature peptides of 20, 22 and 25 amino acids, and these active peptides are rich in cysteines, which form intramolecular bonds that stabilize their beta-sheet structures. These peptides exhibit antimicrobial activity. Mutations in this gene cause hemochromatosis type 2B, also known as juvenile hemochromatosis, a disease caused by severe iron overload that results in cardiomyopathy, cirrhosis, and endocrine failure.
