

HLA-DMA Antibody (monoclonal) (M01)**Mouse monoclonal antibody raised against a full length recombinant HLA-DMA.****Catalog # AT2375a****Specification**

HLA-DMA Antibody (monoclonal) (M01) - Product Information

Application	WB, IHC, E
Primary Accession	P28067
Other Accession	BC011447
Reactivity	Human
Host	mouse
Clonality	Monoclonal
Isotype	IgG1 kappa
Calculated MW	29194

HLA-DMA Antibody (monoclonal) (M01) - Additional Information**Other Names**

HLA class II histocompatibility antigen, DM alpha chain, MHC class II antigen DMA, Really interesting new gene 6 protein, HLA-DMA, DMA, RING6

Target/Specificity

HLA-DMA (AAH11447, 1 a.a. ~ 261 a.a) full-length recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Dilution

WB~~1:500~1000

Format

Clear, colorless solution in phosphate buffered saline, pH 7.2 .

Storage

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions

HLA-DMA Antibody (monoclonal) (M01) is for research use only and not for use in diagnostic or therapeutic procedures.

HLA-DMA Antibody (monoclonal) (M01) - Protocols

Provided below are standard protocols that you may find useful for product applications.

HLA-DMA Antibody (monoclonal) (M01) - Images

Antibody Reactive Against Recombinant Protein. Western Blot detection against Immunogen (54.45 KDa) .

HLA-DMA monoclonal antibody (M01), clone 3F12-F11 Western Blot analysis of HLA-DMA expression in U-2 OS (Cat # AT2375a)

Immunoperoxidase of monoclonal antibody to HLA-DMA on formalin-fixed paraffin-embedded human malignant lymphoma, diffuse large B tissue. [antibody concentration 3 ug/ml]

Detection limit for recombinant GST tagged HLA-DMA is approximately 1ng/ml as a capture antibody.

HLA-DMA Antibody (monoclonal) (M01) - Background

HLA-DMA belongs to the HLA class II alpha chain paralogues. This class II molecule is a heterodimer consisting of an alpha (DMA) and a beta chain (DMB), both anchored in the membrane. It is located in intracellular vesicles. DM plays a central role in the peptide loading of MHC class II molecules by helping to release the CLIP molecule from the peptide binding site. Class II molecules are expressed in antigen presenting cells (APC: B lymphocytes, dendritic cells, macrophages). The alpha chain is approximately 33-35 kDa and its gene contains 5 exons. Exon one encodes the leader peptide, exons 2 and 3 encode the two extracellular domains, exon 4 encodes the transmembrane domain and the cytoplasmic tail.
