

HLA-DRB4 Antibody (monoclonal) (M01)**Mouse monoclonal antibody raised against a full length recombinant HLA-DRB4.****Catalog # AT2378a****Specification**

HLA-DRB4 Antibody (monoclonal) (M01) - Product Information

Application	WB, IHC, E
Primary Accession	P13762
Other Accession	BC005312
Reactivity	Human
Host	Mouse
Clonality	Monoclonal
Isotype	IgG2b Kappa
Calculated MW	29941

HLA-DRB4 Antibody (monoclonal) (M01) - Additional Information**Gene ID** 3126**Other Names**

HLA class II histocompatibility antigen, DR beta 4 chain, MHC class II antigen DRB4, HLA-DRB4

Target/Specificity

HLA-DRB4 (AAH05312, 30 a.a. ~ 266 a.a) full-length recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Dilution

WB~~1:500~1000

IHC~~1:100~500

E~~N/A

Format

Clear, colorless solution in phosphate buffered saline, pH 7.2 .

Storage

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions

HLA-DRB4 Antibody (monoclonal) (M01) is for research use only and not for use in diagnostic or therapeutic procedures.

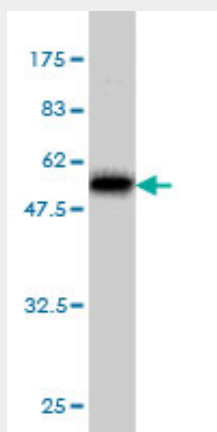

HLA-DRB4 Antibody (monoclonal) (M01) - Protocols

Provided below are standard protocols that you may find useful for product applications.

HLA-DRB4 Antibody (monoclonal) (M01) - Images

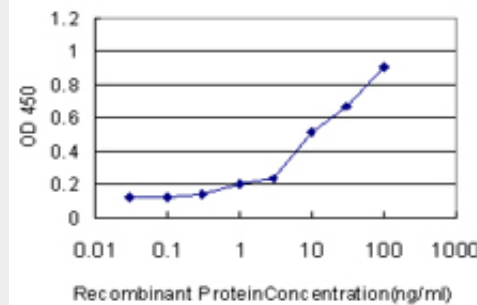

Antibody Reactive Against Recombinant Protein. Western Blot detection against Immunogen (51.81 kDa) .

HLA-DRB4 monoclonal antibody (M01), clone 4C8. Western Blot analysis of HLA-DRB4 expression in human kidney.

Immunoperoxidase of monoclonal antibody to HLA-DRB4 on formalin-fixed paraffin-embedded human tonsil. [antibody concentration 1 ug/ml]

Detection limit for recombinant GST tagged HLA-DRB4 is approximately 1ng/ml as a capture antibody.

HLA-DRB4 Antibody (monoclonal) (M01) - Background

HLA-DRB4 belongs to the HLA class II beta chain paralogues. This class II molecule is a heterodimer consisting of an alpha (DRA) and a beta (DRB) chain, both anchored in the membrane. It plays a central role in the immune system by presenting peptides derived from extracellular proteins. Class II molecules are expressed in antigen presenting cells (APC: B lymphocytes, dendritic cells, macrophages). The beta chain is approximately 26-28 kDa and its gene contains 6 exons. Exon one encodes the leader peptide, exons 2 and 3 encode the two extracellular domains, exon 4 encodes the transmembrane domain and exon 5 encodes the cytoplasmic tail. Within the DR molecule the beta chain contains all the polymorphisms specifying the peptide binding specificities. Typing for these polymorphisms is routinely done for bone marrow and kidney transplantation. DRB1 is expressed at a level five times higher than its paralogues DRB3, DRB4 and DRB5. The presence of DRB4 is linked with allelic variants of DRB1, otherwise it is omitted. There are 4 related pseudogenes: DRB2, DRB6, DRB7, DRB8 and DRB9.
