

MID1 Antibody (monoclonal) (M06)

Mouse monoclonal antibody raised against a partial recombinant MID1. Catalog # AT2869a

Specification

MID1 Antibody (monoclonal) (M06) - Product Information

Application Primary Accession Other Accession Reactivity Host Clonality Isotype Calculated MW WB <u>015344</u> <u>BC053626</u> Human mouse Monoclonal IgG2b Kappa 75251

MID1 Antibody (monoclonal) (M06) - Additional Information

Gene ID 4281

Other Names E3 ubiquitin-protein ligase Midline-1, 632-, Midin, Putative transcription factor XPRF, RING finger protein 59, RING finger protein Midline-1, Tripartite motif-containing protein 18, MID1, FXY, RNF59, TRIM18, XPRF

Target/Specificity MID1 (AAH53626, 441 a.a. ~ 540 a.a) partial recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Dilution WB~~1:500~1000

Format Clear, colorless solution in phosphate buffered saline, pH 7.2 .

Storage Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions MID1 Antibody (monoclonal) (M06) is for research use only and not for use in diagnostic or therapeutic procedures.

MID1 Antibody (monoclonal) (M06) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides

- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

MID1 Antibody (monoclonal) (M06) - Images

Antibody Reactive Against Recombinant Protein.Western Blot detection against Immunogen (36.63 KDa) .

MID1 Antibody (monoclonal) (M06) - Background

The protein encoded by this gene is a member of the tripartite motif (TRIM) family, also known as the 'RING-B box-coiled coil' (RBCC) subgroup of RING finger proteins. The TRIM motif includes three zinc-binding domains, a RING, a B-box type 1 and a B-box type 2, and a coiled-coil region. This protein forms homodimers which associate with microtubules in the cytoplasm. The protein is likely involved in the formation of multiprotein structures acting as anchor points to microtubules. Mutations in this gene have been associated with the X-linked form of Opitz syndrome, which is characterized by midline abnormalities such as cleft lip, laryngeal cleft, heart defects, hypospadias, and agenesis of the corpus callosum. This gene was also the first example of a gene subject to X inactivation in human while escaping it in mouse. Multiple different transcript variants are generated by alternate splicing; however, the full-length nature of some of the variants has not been determined.
