PCDHA10 Antibody (monoclonal) (M01)

Mouse monoclonal antibody raised against a partial recombinant PCDHA10.
Catalog # AT3217a

Specification

PCDHA10 Antibody (monoclonal) (M01) - Product Information

Application	**WB, IHC**
Primary Accession	Q9Y5I2
Other Accession	NM_018901
Reactivity	**Human**
Host	**mouse**
Clonality	**Monoclonal**
Isotype	**IgG1 Kappa**
Calculated MW	**102875**

PCDHA10 Antibody (monoclonal) (M01) - Additional Information

Gene ID 56139

Other Names
Protocadherin alpha-10, PCDH-alpha-10, PCDHA10, CNRS8

Target/Specificity
PCDHA10 (NP_061724, 182 a.a. ~ 290 a.a) partial recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Dilution
WB~~1:500~1000
IHC~~1:100~500

Format
Clear, colorless solution in phosphate buffered saline, pH 7.2 .

Storage
Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions
PCDHA10 Antibody (monoclonal) (M01) is for research use only and not for use in diagnostic or therapeutic procedures.

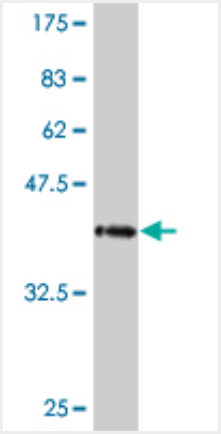
PCDHA10 Antibody (monoclonal) (M01) - Protocols

Provided below are standard protocols that you may find useful for product applications.

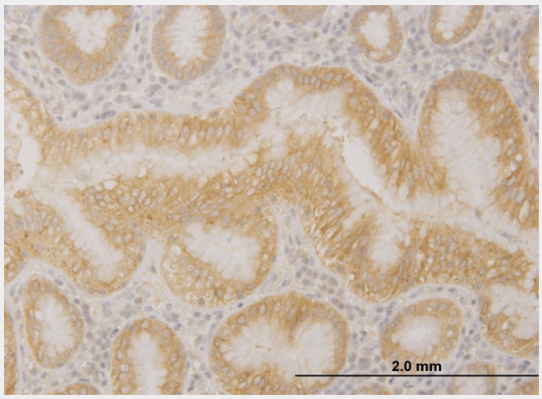
- Western Blot
- Blocking Peptides
- Dot Blot

- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

PCDHA10 Antibody (monoclonal) (M01) - Images



Antibody Reactive Against Recombinant Protein.Western Blot detection against Immunogen (37.73 KDa) .



Immunoperoxidase of monoclonal antibody to PCDHA10 on formalin-fixed paraffin-embedded human stomach. [antibody concentration 3 ug/ml]

PCDHA10 Antibody (monoclonal) (M01) - Background

This gene is a member of the protocadherin alpha gene cluster, one of three related gene clusters tandemly linked on chromosome five that demonstrate an unusual genomic organization similar to that of B-cell and T-cell receptor gene clusters. The alpha gene cluster is composed of 15 cadherin superfamily genes related to the mouse CNR genes and consists of 13 highly similar and 2 more distantly related coding sequences. The tandem array of 15 N-terminal exons, or variable exons, are followed by downstream C-terminal exons, or constant exons, which are shared by all genes in the cluster. The large, uninterrupted N-terminal exons each encode six cadherin ectodomains while the C-terminal exons encode the cytoplasmic domain. These neural cadherin-like cell adhesion proteins are integral plasma membrane proteins that most likely play a critical role in the establishment and function of specific cell-cell connections in the brain. Alternative splicing has been observed and additional variants have been suggested but their full-length nature has yet to be determined.
