

PCGF2 Antibody (monoclonal) (M05)**Mouse monoclonal antibody raised against a partial recombinant PCGF2.****Catalog # AT3232a****Specification**

PCGF2 Antibody (monoclonal) (M05) - Product Information

Application	WB
Primary Accession	P35227
Other Accession	BC004858
Reactivity	Human
Host	mouse
Clonality	Monoclonal
Isotype	IgG2a Kappa
Calculated MW	37788

PCGF2 Antibody (monoclonal) (M05) - Additional Information**Gene ID** 7703**Other Names**

Polycomb group RING finger protein 2, DNA-binding protein Mel-18, RING finger protein 110, Zinc finger protein 144, PCGF2, MEL18, RNF110, ZNF144

Target/Specificity

PCGF2 (AAH04858.1, 236 a.a. ~ 294 a.a) partial recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Dilution

WB~~1:500~1000

Format

Clear, colorless solution in phosphate buffered saline, pH 7.2 .

Storage

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions

PCGF2 Antibody (monoclonal) (M05) is for research use only and not for use in diagnostic or therapeutic procedures.

PCGF2 Antibody (monoclonal) (M05) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)

- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

PCGF2 monoclonal antibody (M05), clone 2D6. Western Blot analysis of PCGF2 expression in human placenta.

PCGF2 Antibody (monoclonal) (M05) - Background

The protein encoded by this gene contains a RING finger motif and is similar to the polycomb group (PcG) gene products. PcG gene products form complexes via protein-protein interaction and maintain the transcription repression of genes involved in embryogenesis, cell cycles, and tumorigenesis. This protein was shown to act as a negative regulator of transcription and has tumor suppressor activity. The expression of this gene was detected in various tumor cells, but is limited in neural organs in normal tissues. Knockout studies in mice suggested that this protein may negatively regulate the expression of different cytokines, chemokines, and chemokine receptors, and thus plays an important role in lymphocyte differentiation and migration, as well as in immune responses.
