SALF Antibody (monoclonal) (M01) - Background

The STON1-GTF2A1L mRNA is an infrequent but naturally occurring readthrough product of the neighboring STON1 and GTF2A1L genes. This rare transcript encodes a fusion protein composed of greater than 95% each of the individual elements, stonin 1 and general transcription factor IIA, 1-like. The significance of this readthrough mRNA and the function of its protein product have not yet been determined.
