

## TAF1 Antibody (monoclonal) (M02)

Mouse monoclonal antibody raised against a partial recombinant TAF1. Catalog # AT4137a

# **Specification**

# TAF1 Antibody (monoclonal) (M02) - Product Information

WB Application **Primary Accession** P21675 Other Accession NM 004606 Reactivity Human Host mouse Clonality **Monoclonal** Isotype IgG2a Kappa Calculated MW 214714

# TAF1 Antibody (monoclonal) (M02) - Additional Information

#### **Gene ID 6872**

#### **Other Names**

Transcription initiation factor TFIID subunit 1, Cell cycle gene 1 protein, TBP-associated factor 250 kDa, p250, Transcription initiation factor TFIID 250 kDa subunit, TAF(II)250, TAFII-250, TAFI1, BA2R, CCG1, CCGS, TAF2A

# Target/Specificity

TAF1 (NP\_004597, 1784 a.a.  $\sim$  1893 a.a) partial recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

### **Dilution**

WB~~1:500~1000

#### **Format**

Clear, colorless solution in phosphate buffered saline, pH 7.2.

#### Storage

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

# **Precautions**

TAF1 Antibody (monoclonal) (M02) is for research use only and not for use in diagnostic or therapeutic procedures.

# TAF1 Antibody (monoclonal) (M02) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides

- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

# TAF1 Antibody (monoclonal) (M02) - Images

Antibody Reactive Against Recombinant Protein. Western Blot detection against Immunogen (37.84 KDa).

TAF1 monoclonal antibody (M02), clone 1G9 Western Blot analysis of TAF1 expression in Hela S3 NE ( (Cat # AT4137a )

# TAF1 Antibody (monoclonal) (M02) - Background

Initiation of transcription by RNA polymerase II requires the activities of more than 70 polypeptides. The protein that coordinates these activities is the basal transcription factor TFIID, which binds to the core promoter to position the polymerase properly, serves as the scaffold for assembly of the remainder of the transcription complex, and acts as a channel for regulatory signals. TFIID is composed of the TATA-binding protein (TBP) and a group of evolutionarily conserved proteins known as TBP-associated factors or TAFs. TAFs may participate in basal transcription, serve as coactivators, function in promoter recognition or modify general transcription factors (GTFs) to facilitate complex assembly and transcription initiation. This gene encodes the largest subunit of TFIID. This subunit binds to core promoter sequences encompassing the transcription start site. It also binds to activators and other transcriptional regulators, and these interactions affect the rate of transcription initiation. This subunit contains two independent protein

kinase domains at the N and C-terminals, but also possesses acetyltransferase activity and can act as a ubiquitin-activating/conjugating enzyme. This gene is part of a complex transcriptional unit (TAF1/DYT3), wherein some products share exons with TAF1 as well as additional exons downstream.
