

### **GRB2 Antibody (Y209)**

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AW5382

## **Specification**

## **GRB2 Antibody (Y209) - Product Information**

Application WB,E
Primary Accession P62993

Other Accession <u>P62994</u>, <u>Q60631</u>, <u>Q07883</u>, <u>Q6GPI9</u>, <u>P87379</u>

Reactivity Human, Rat

Predicted Xenopus, Chicken, Mouse

Host Rabbit Clonality Polyclonal

Calculated MW H=25,21;M=25,21;R=25 KDa

Isotype Rabbit IgG
Antigen Source HUMAN

# GRB2 Antibody (Y209) - Additional Information

**Gene ID 2885** 

**Antigen Region** 

187-216

## **Other Names**

Growth factor receptor-bound protein 2, Adapter protein GRB2, Protein Ash, SH2/SH3 adapter GRB2, GRB2, ASH

### **Dilution**

WB~~1:1000

## Target/Specificity

This GRB2 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 187-216 amino acids from human GRB2.

#### **Format**

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

## **Storage**

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

#### **Precautions**

GRB2 Antibody (Y209) is for research use only and not for use in diagnostic or therapeutic procedures.

## GRB2 Antibody (Y209) - Protein Information

#### Name GRB2

#### Synonyms ASH

#### **Function**

Non-enzymatic adapter protein that plays a pivotal role in precisely regulated signaling cascades from cell surface receptors to cellular responses, including signaling transduction and gene expression (PubMed:<a href="http://www.uniprot.org/citations/11726515" target=" blank">11726515</a>, PubMed:<a href="http://www.uniprot.org/citations/37626338" target="blank">37626338</a>). Thus, participates in many biological processes including regulation of innate and adaptive immunity, autophagy, DNA repair or necroptosis (PubMed: <a href="http://www.uniprot.org/citations/35831301" target=" blank">35831301</a>, PubMed:<a href="http://www.uniprot.org/citations/37626338" target="blank">37626338</a>, PubMed:<a href="http://www.uniprot.org/citations/38182563" target="blank">38182563</a>). Controls signaling complexes at the T-cell antigen receptor to facilitate the activation, differentiation, and function of T-cells (PubMed: <a href="http://www.uniprot.org/citations/36864087" target=" blank">36864087</a>, PubMed:<a href="http://www.uniprot.org/citations/9489702" target=" blank">9489702</a>). Mechanistically, engagement of the TCR leads to phosphorylation of the adapter protein LAT, which serves as docking site for GRB2 (PubMed:<a href="http://www.uniprot.org/citations/9489702" target=" blank">9489702</a>). In turn, GRB2 establishes a a connection with SOS1 that acts as a quanine nucleotide exchange factor and serves as a critical regulator of KRAS/RAF1 leading to MAPKs translocation to the nucleus and activation (PubMed: <a href="http://www.uniprot.org/citations/12171928" target=" blank">12171928</a>, PubMed:<a href="http://www.uniprot.org/citations/25870599" target="blank">25870599</a>). Functions also a role in B-cell activation by amplifying Ca(2+) mobilization and activation of the ERK MAP kinase pathway upon recruitment to the phosphorylated B-cell antigen receptor (BCR) (PubMed:<a href="http://www.uniprot.org/citations/25413232" target=" blank">25413232</a>, PubMed:<a href="http://www.uniprot.org/citations/29523808" target="blank">29523808</a>). Plays a role in switching between autophagy and programmed necrosis upstream of EGFR by interacting with components of necrosomes including RIPK1 and with autophagy regulators SQSTM1 and BECN1 (PubMed:<a href="http://www.uniprot.org/citations/35831301" target=" blank">35831301</a>, PubMed:<a href="http://www.uniprot.org/citations/38182563" target=" blank">38182563</a>). Regulates miRNA biogenesis by forming a functional ternary complex with AGO2 and DICER1 (PubMed:<a href="http://www.uniprot.org/citations/37328606" target=" blank">37328606</a>). Functions in the replication stress response by protecting DNA at stalled replication forks from MRE11-mediated degradation. Mechanistically, inhibits RAD51 ATPase activity to stabilize RAD51 on stalled replication forks (PubMed: <a href="http://www.uniprot.org/citations/38459011" target=" blank">38459011</a>). Additionally, directly recruits and later releases MRE11 at DNA damage sites during the homology-directed repair (HDR) process (PubMed: <a href="http://www.uniprot.org/citations/34348893" target=" blank">34348893</a>).

#### **Cellular Location**

Nucleus. Cytoplasm. Endosome. Golgi apparatus {ECO:0000250|UniProtKB:Q60631}

### GRB2 Antibody (Y209) - Protocols

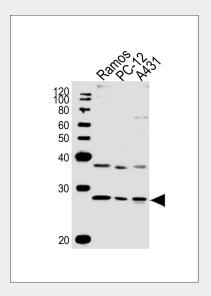

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- <u>Immunofluorescence</u>
- Immunoprecipitation

- Flow Cytomety
- Cell Culture

# GRB2 Antibody (Y209) - Images

All lanes : Anti-GRB2 Antibody pY209 at 1:1000 dilution Lane 1: Ramos whole cell lysates Lane 2: PC-12 whole cell lysates Lane 3: A431 whole cell lysates Lysates/proteins at 20  $\mu$ g per lane. Secondary Goat Anti-Rabbit IgG, (H+L),Peroxidase conjugated at 1/10000 dilution Predicted band size : 25 kDa Blocking/Dilution buffer: 5% NFDM/TBST.

# GRB2 Antibody (Y209) - Background

GRB2 binds the epidermal growth factor receptor and contains one SH2 domain and two SH3 domains. Its two SH3 domains direct complex formation with proline-rich regions of other proteins, and its SH2 domain binds tyrosine phosphorylated sequences. This gene is similar to the Sem5 gene of C.elegans, which is involved in the signal transduction pathway.
