

PCDHGC3 Antibody (Center) Blocking peptide

Synthetic peptide Catalog # BP10141c

Specification

PCDHGC3 Antibody (Center) Blocking peptide - Product Information

Primary Accession

Other Accession <u>NP_115778.1</u>, <u>NP_002579.2</u>, <u>NP_115779.1</u>

Q9UN70

PCDHGC3 Antibody (Center) Blocking peptide - Additional Information

Gene ID 5098

Other Names

Protocadherin gamma-C3, PCDH-gamma-C3, Protocadherin-2, Protocadherin-43, PC-43, PCDHGC3, PCDH2

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

PCDHGC3 Antibody (Center) Blocking peptide - Protein Information

Name PCDHGC3

Synonyms PCDH2

Function

Potential calcium-dependent cell-adhesion protein. May be involved in the establishment and maintenance of specific neuronal connections in the brain.

Cellular Location

Cell membrane; Single-pass type I membrane protein

PCDHGC3 Antibody (Center) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

PCDHGC3 Antibody (Center) Blocking peptide - Background

This gene is a member of the protocadherin gamma genecluster, one of three related clusters tandemly linked onchromosome five. These gene clusters have an immunoglobulin-likeorganization, suggesting that a novel mechanism may be involved intheir regulation and expression. The gamma gene cluster includes 22genes divided into 3 subfamilies. Subfamily A contains 12 genes, subfamily B contains 7 genes and 2 pseudogenes, and the moredistantly related subfamily C contains 3 genes. The tandem array of22 large, variable region exons are followed by a constant region, containing 3 exons shared by all genes in the cluster. Eachvariable region exon encodes the extracellular region, whichincludes 6 cadherin ectodomains and a transmembrane region. Theconstant region exons encode the common cytoplasmic region. Theseneural cadherin-like cell adhesion proteins most likely play acritical role in the establishment and function of specificcell-cell connections in the brain. Alternative splicing has beendescribed for the gamma cluster genes.
