

**FBXW8 Antibody (Center) Blocking peptide**  
**Synthetic peptide**  
**Catalog # BP10719c**

**Specification**

---

**FBXW8 Antibody (Center) Blocking peptide - Product Information**

Primary Accession [Q8N3Y1](#)

**FBXW8 Antibody (Center) Blocking peptide - Additional Information**

**Gene ID** 26259

**Other Names**

F-box/WD repeat-containing protein 8, F-box and WD-40 domain-containing protein 8, F-box only protein 29, FBXW8, FBW6, FBW8, FBX29, FBXO29, FBXW6

**Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**FBXW8 Antibody (Center) Blocking peptide - Protein Information**

**Name** FBXW8

**Synonyms** FBW6, FBW8, FBX29, FBXO29, FBXW6

**Function**

Substrate-recognition component of a Cul7-RING ubiquitin- protein ligase complex, which mediates the ubiquitination and subsequent proteasomal degradation of target proteins. The Cul7-RING(FBXW8) complex mediates ubiquitination and consequent degradation of GORASP1, acting as a component of the ubiquitin ligase pathway that regulates Golgi morphogenesis and dendrite patterning in brain (PubMed:<a href="http://www.uniprot.org/citations/21572988" target="\_blank">21572988</a>). Mediates ubiquitination and degradation of IRS1 in a mTOR-dependent manner: the Cul7-RING(FBXW8) complex recognizes and binds IRS1 previously phosphorylated by S6 kinase (RPS6KB1 or RPS6KB2) (PubMed:<a href="http://www.uniprot.org/citations/18498745" target="\_blank">18498745</a>). The Cul7-RING(FBXW8) complex also mediates ubiquitination of MAP4K1/HPK1: recognizes and binds autophosphorylated MAP4K1/HPK1, leading to its degradation, thereby affecting cell proliferation and differentiation (PubMed:<a href="http://www.uniprot.org/citations/24362026" target="\_blank">24362026</a>). Associated component of the 3M complex, suggesting that it mediates some of 3M complex functions (PubMed:<a href="http://www.uniprot.org/citations/24793695" target="\_blank">24793695</a>).

**Cellular Location**

Cytoplasm, perinuclear region. Golgi apparatus. Note=Colocalizes with CUL7 at the Golgi apparatus in neurons. {ECO:0000250|UniProtKB:P0DL28}

**FBXW8 Antibody (Center) Blocking peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.

**FBXW8 Antibody (Center) Blocking peptide - Images****FBXW8 Antibody (Center) Blocking peptide - Background**

This gene encodes a member of the F-box protein family, members of which are characterized by an approximately 40 aminoacid motif, the F-box. The F-box proteins constitute one of the four subunits of ubiquitin protein ligase complex called SCFs(SKP1-cullin-F-box), which function in phosphorylation-dependentubiquitination. The F-box proteins are divided into three classes:Fbws containing WD-40 domains, Fbls containing leucine-richrepeats, and Fbxs containing either different protein-proteininteraction modules or no recognizable motifs. The protein encodedby this gene contains a WD-40 domain, in addition to an F-boxmotif, so it belongs to the Fbw class. Alternatively splicedtranscript variants encoding distinct isoforms have been identifiedfor this gene.
