

ELP3 Antibody (N-term) Blocking Peptide
Synthetic peptide
Catalog # BP1112a**Specification**

ELP3 Antibody (N-term) Blocking Peptide - Product InformationPrimary Accession [Q9H9T3](#)**ELP3 Antibody (N-term) Blocking Peptide - Additional Information****Gene ID** 55140**Other Names**

Elongator complex protein 3, hELP3, ELP3

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP1112a](/product/products/AP1112a) was selected from the N-term region of human ELP3. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

ELP3 Antibody (N-term) Blocking Peptide - Protein Information**Name** ELP3 {ECO:0000303|PubMed:15902492, ECO:0000312|HGNC:HGNC:20696}**Function**

Catalytic tRNA acetyltransferase subunit of the elongator complex which is required for multiple tRNA modifications, including mcm5U (5-methoxycarbonylmethyl uridine), mcm5s2U (5-methoxycarbonylmethyl-2-thiouridine), and ncm5U (5-carbamoylmethyl uridine) (PubMed: [29415125](http://www.uniprot.org/citations/29415125)). In the elongator complex, acts as a tRNA uridine(34) acetyltransferase by mediating formation of carboxymethyluridine in the wobble base at position 34 in tRNAs (By similarity). May also act as a protein lysine acetyltransferase by mediating acetylation of target proteins; such activity is however unclear in vivo and recent evidences suggest that ELP3 primarily acts as a tRNA acetyltransferase (PubMed: [29415125](http://www.uniprot.org/citations/29415125)). Involved in neurogenesis: regulates the migration and branching of projection neurons in the developing cerebral cortex, through a process depending on alpha-tubulin acetylation (PubMed: [19185337](http://www.uniprot.org/citations/19185337))

target="_blank">19185337). Required for acetylation of GJA1 in the developing cerebral cortex (By similarity).

Cellular Location

Cytoplasm. Nucleus [Isoform 2]: Cytoplasm. Nucleus

Tissue Location

Expressed in the cerebellum and spinal motor neurons.

ELP3 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

ELP3 Antibody (N-term) Blocking Peptide - Images**ELP3 Antibody (N-term) Blocking Peptide - Background**

Elongator complex protein 3 (ELP3) is a catalytic histone acetyltransferase subunit of the RNA polymerase II elongator complex, which is a component of the RNA polymerase II (Pol II) holoenzyme and is involved in transcriptional elongation. Elongator may play a role in chromatin remodeling and is involved in acetylation of histones H3 and probably H4. It may also have a methyltransferase activity.
