

OTOA Antibody (N-term) Blocking peptide Synthetic peptide

Catalog # BP11149a

Specification

OTOA Antibody (N-term) Blocking peptide - Product Information

Primary Accession

<u>Q7RTW8</u>

OTOA Antibody (N-term) Blocking peptide - Additional Information

Gene ID 146183

Other Names Otoancorin, OTOA

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions This product is for research use only. Not for use in diagnostic or therapeutic procedures.

OTOA Antibody (N-term) Blocking peptide - Protein Information

Name OTOA

Function May act as an adhesion molecule.

Cellular Location

Apical cell membrane; Lipid-anchor, GPI-anchor; Extracellular side. Secreted, extracellular space, extracellular matrix. Note=At the interface between the apical surface of the epithelia and the overlying acellular gel of the tectorial and otoconial membranes.

OTOA Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

Blocking Peptides

OTOA Antibody (N-term) Blocking peptide - Background

The protein encoded by this gene is specifically expressed in the inner ear, and is located at the interface between theapical surface of the inner ear sensory epithelia and theiroverlying acellular gels. It is proposed that this protein isinvolved in the attachment of the inner ear acellular gels to theapical surface of the underlying nonsensory cells. Mutations in this gene are associated with autosomal recessive deafness type 22(DFNB22). Alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided byRefSeq].
