

AHCY Antibody (N-term) Blocking peptide
Synthetic peptide
Catalog # BP11201a**Specification**

AHCY Antibody (N-term) Blocking peptide - Product InformationPrimary Accession [P23526](#)**AHCY Antibody (N-term) Blocking peptide - Additional Information****Gene ID** 191**Other Names**

Adenosylhomocysteinase, AdoHcyase, S-adenosyl-L-homocysteine hydrolase, AHCY, SAHH

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

AHCY Antibody (N-term) Blocking peptide - Protein Information**Name** AHCY**Synonyms** SAHH**Function**

Catalyzes the hydrolysis of S-adenosyl-L-homocysteine to form adenosine and homocysteine (PubMed:10933798). Binds copper ions (By similarity).

Cellular Location

Cytoplasm. Melanosome. Nucleus. Endoplasmic reticulum. Note=Identified by mass spectrometry in melanosome fractions from stage I to stage IV

AHCY Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

AHCY Antibody (N-term) Blocking peptide - Background

S-adenosylhomocysteine hydrolase belongs to the adenosylhomocysteinase family. It catalyzes the reversible hydrolysis of S-adenosylhomocysteine (AdoHcy) to adenosine (Ado) and L-homocysteine (Hcy). Thus, it regulates the intracellular S-adenosylhomocysteine (SAH) concentration thought to be important for transmethylation reactions. Deficiency in this protein is one of the different causes of hypermethioninemia. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
