

CYP1A2 Antibody (Center) Blocking peptide
Synthetic peptide
Catalog # BP11325c**Specification**

CYP1A2 Antibody (Center) Blocking peptide - Product InformationPrimary Accession [P05177](#)**CYP1A2 Antibody (Center) Blocking peptide - Additional Information****Gene ID** 1544**Other Names**

Cytochrome P450 1A2, CYPIA2, Cytochrome P(3)450, Cytochrome P450 4, Cytochrome P450-P3, CYP1A2

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

CYP1A2 Antibody (Center) Blocking peptide - Protein Information**Name** CYP1A2 {ECO:0000303|PubMed:2575218, ECO:0000312|HGNC:HGNC:2596}**Function**

A cytochrome P450 monooxygenase involved in the metabolism of various endogenous substrates, including fatty acids, steroid hormones and vitamins (PubMed:9435160, PubMed:10681376, PubMed:11555828, PubMed:12865317, PubMed:19965576).

Mechanistically, uses molecular oxygen inserting one oxygen atom into a substrate, and reducing the second into a water molecule, with two electrons provided by NADPH via cytochrome P450 reductase (NADPH--hemoprotein reductase) (PubMed:9435160, PubMed:10681376, PubMed:11555828, PubMed:12865317, PubMed:19965576). Catalyzes the hydroxylation of carbon-hydrogen bonds (PubMed:11555828, PubMed:11555828, PubMed:11555828).

[12865317](http://www.uniprot.org/citations/12865317)). Exhibits high catalytic activity for the formation of hydroxysteroids from estrone (E1) and 17 β -estradiol (E2), namely 2-hydroxy E1 and E2 (PubMed: [11555828](http://www.uniprot.org/citations/11555828), PubMed: [12865317](http://www.uniprot.org/citations/12865317)). Metabolizes cholesterol toward 25-hydroxycholesterol, a physiological regulator of cellular cholesterol homeostasis (PubMed: [21576599](http://www.uniprot.org/citations/21576599)). May act as a major enzyme for all-trans retinoic acid biosynthesis in the liver. Catalyzes two successive oxidative transformation of all-trans retinol to all-trans retinal and then to the active form all-trans retinoic acid (PubMed: [10681376](http://www.uniprot.org/citations/10681376)). Primarily catalyzes stereoselective epoxidation of the last double bond of polyunsaturated fatty acids (PUFA), displaying a strong preference for the (R,S) stereoisomer (PubMed: [19965576](http://www.uniprot.org/citations/19965576)). Catalyzes bisallylic hydroxylation and omega-1 hydroxylation of PUFA (PubMed: [9435160](http://www.uniprot.org/citations/9435160)). May also participate in eicosanoids metabolism by converting hydroperoxide species into oxo metabolites (lipoxygenase-like reaction, NADPH-independent) (PubMed: [21068195](http://www.uniprot.org/citations/21068195)). Plays a role in the oxidative metabolism of xenobiotics. Catalyzes the N-hydroxylation of heterocyclic amines and the O-deethylation of phenacetin (PubMed: [14725854](http://www.uniprot.org/citations/14725854)). Metabolizes caffeine via N3-demethylation (Probable).

Cellular Location

Endoplasmic reticulum membrane; Peripheral membrane protein. Microsome membrane; Peripheral membrane protein

Tissue Location

Liver.

CYP1A2 Antibody (Center) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

CYP1A2 Antibody (Center) Blocking peptide - Background

This gene encodes a member of the cytochrome P450 superfamily of enzymes. The cytochrome P450 proteins are monooxygenases which catalyze many reactions involved in drug metabolism and synthesis of cholesterol, steroids and other lipids. The protein encoded by this gene localizes to the endoplasmic reticulum and its expression is induced by some polycyclic aromatic hydrocarbons (PAHs), some of which are found in cigarette smoke. The enzyme's endogenous substrate is unknown; however, it is able to metabolize some PAHs to carcinogenic intermediates. Other xenobiotic substrates for this enzyme include caffeine, aflatoxin B1, and acetaminophen. The transcript from this gene contains four Alu sequences flanked by direct repeats in the 3' untranslated region.
