

KHSRP Antibody (Center) Blocking peptide

Synthetic peptide Catalog # BP11709c

Specification

KHSRP Antibody (Center) Blocking peptide - Product Information

Primary Accession

Q92945

KHSRP Antibody (Center) Blocking peptide - Additional Information

Gene ID 8570

Other Names

Far upstream element-binding protein 2, FUSE-binding protein 2, KH type-splicing regulatory protein, KSRP, p75, KHSRP, FUBP2

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

KHSRP Antibody (Center) Blocking peptide - Protein Information

Name KHSRP

Synonyms FUBP2

Function

Binds to the dendritic targeting element and may play a role in mRNA trafficking (By similarity). Part of a ternary complex that binds to the downstream control sequence (DCS) of the pre-mRNA. Mediates exon inclusion in transcripts that are subject to tissue- specific alternative splicing. May interact with single-stranded DNA from the far-upstream element (FUSE). May activate gene expression. Also involved in degradation of inherently unstable mRNAs that contain AU-rich elements (AREs) in their 3'-UTR, possibly by recruiting degradation machinery to ARE-containing mRNAs.

Cellular Location

Nucleus. Cytoplasm. Note=A small proportion is also found in the cytoplasm of neuronal cell bodies and dendrites.

Tissue Location

Detected in neural and non-neural cell lines.

KHSRP Antibody (Center) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

KHSRP Antibody (Center) Blocking peptide - Background

This gene is a member of the Antp homeobox family andencodes a protein with a homeobox DNA-binding domain. It isincluded in a cluster of homeobox B genes located on chromosome 17. The encoded protein functions as a sequence-specific transcription factor that is involved in development, including that of lung andskin, and has been localized to both the nucleus and cytoplasm. Altered expression of this gene or a change in the subcellular localization of its protein is associated with some cases of acutemyeloid leukemia and colorectal cancer.
