

TUBB2B Antibody (N-term) Blocking peptide
Synthetic peptide
Catalog # BP11940a**Specification**

TUBB2B Antibody (N-term) Blocking peptide - Product InformationPrimary Accession [Q9BVA1](#)**TUBB2B Antibody (N-term) Blocking peptide - Additional Information****Gene ID** 347733**Other Names**

Tubulin beta-2B chain, TUBB2B

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

TUBB2B Antibody (N-term) Blocking peptide - Protein Information**Name** TUBB2B**Function**

Tubulin is the major constituent of microtubules, a cylinder consisting of laterally associated linear protofilaments composed of alpha- and beta-tubulin heterodimers (PubMed:23001566, PubMed:28013290, PubMed:26732629). Microtubules grow by the addition of GTP-tubulin dimers to the microtubule end, where a stabilizing cap forms. Below the cap, tubulin dimers are in GDP-bound state, owing to GTPase activity of alpha-tubulin. Plays a critical role in proper axon guidance in both central and peripheral axon tracts (PubMed:23001566). Implicated in neuronal migration (PubMed:19465910).

Cellular Location

Cytoplasm, cytoskeleton

Tissue Location

High expression in brain.

TUBB2B Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

TUBB2B Antibody (N-term) Blocking peptide - Images**TUBB2B Antibody (N-term) Blocking peptide - Background**

The protein encoded by this gene is a beta isoform oftubulin, which binds GTP and is a major component of microtubules. This gene is highly similar to TUBB2A and TUBB2C. Defects in this gene are a cause of asymmetric polymicrogyria. [provided by RefSeq].
