

SRGN Antibody (C-term) Blocking peptide Synthetic peptide

Catalog # BP12292b

Specification

SRGN Antibody (C-term) Blocking peptide - Product Information

Primary Accession

<u>P10124</u>

SRGN Antibody (C-term) Blocking peptide - Additional Information

Gene ID 5552

Other Names

Serglycin, Hematopoietic proteoglycan core protein, Platelet proteoglycan core protein, PPG, Secretory granule proteoglycan core protein, SRGN, PRG, PRG1

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions This product is for research use only. Not for use in diagnostic or therapeutic procedures.

SRGN Antibody (C-term) Blocking peptide - Protein Information

Name SRGN

Synonyms PRG, PRG1

Function

Plays a role in formation of mast cell secretory granules and mediates storage of various compounds in secretory vesicles. Required for storage of some proteases in both connective tissue and mucosal mast cells and for storage of granzyme B in T-lymphocytes. Plays a role in localizing neutrophil elastase in azurophil granules of neutrophils. Mediates processing of MMP2. Plays a role in cytotoxic cell granule- mediated apoptosis by forming a complex with granzyme B which is delivered to cells by perforin to induce apoptosis. Regulates the secretion of TNF-alpha and may also regulate protease secretion. Inhibits bone mineralization.

Cellular Location

Cytoplasmic granule. Cytolytic granule. Secreted, extracellular space. Golgi apparatus Note=Found in mast cell granules and in cytoplasmic granules of cytolytic T lymphocytes from where it is secreted upon cell activation (By similarity). Secreted constitutively by endothelial cells and macrophages (PubMed:11154222). Located to Golgi apparatus during neutrophil differentiation (PubMed:15136585) {ECO:0000250|UniProtKB:P13609, ECO:0000269|PubMed:11154222, ECO:0000269|PubMed:15136585}

SRGN Antibody (C-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

SRGN Antibody (C-term) Blocking peptide - Background

This gene encodes a protein best known as a hematopoieticcell granule proteoglycan. Proteoglycans stored in the secretorygranules of many hematopoietic cells also contain aprotease-resistant peptide core, which may be important forneutralizing hydrolytic enzymes. This encoded protein was found tobe associated with the macromolecular complex of granzymes andperforin, which may serve as a mediator of granule-mediatedapoptosis. Two transcript variants, only one of themprotein-coding, have been found for this gene. [provided byRefSeq].
