

SFRS7 Antibody (N-term) Blocking peptide
Synthetic peptide
Catalog # BP12306a**Specification**

SFRS7 Antibody (N-term) Blocking peptide - Product InformationPrimary Accession [Q16629](#)**SFRS7 Antibody (N-term) Blocking peptide - Additional Information****Gene ID** 6432**Other Names**

Serine/arginine-rich splicing factor 7, Splicing factor 9G8, Splicing factor, arginine/serine-rich 7, SRSF7, SFRS7

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

SFRS7 Antibody (N-term) Blocking peptide - Protein Information**Name** SRSF7**Synonyms** SFRS7**Function**

Required for pre-mRNA splicing. Can also modulate alternative splicing in vitro. Represses the splicing of MAPT/Tau exon 10. May function as export adapter involved in mRNA nuclear export such as of histone H2A. Binds mRNA which is thought to be transferred to the NXF1- NXT1 heterodimer for export (TAP/NXF1 pathway); enhances NXF1-NXT1 RNA- binding activity. RNA-binding is semi-sequence specific.

Cellular Location

Nucleus. Cytoplasm

Tissue Location

Brain, liver, kidney and lung.

SFRS7 Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

SFRS7 Antibody (N-term) Blocking peptide - Background

The protein encoded by this gene is a member of the serine/arginine (SR)-rich family of pre-mRNA splicing factors, which constitute part of the spliceosome. Each of these factors contains an RNA recognition motif (RRM) for binding RNA and an RS domain for binding other proteins. The RS domain is rich in serine and arginine residues and facilitates interaction between different SR splicing factors. In addition to being critical for mRNA splicing, the SR proteins have also been shown to be involved in mRNA export from the nucleus and in translation. Two transcript variants encoding different isoforms have been found for this gene.
