

## PCDHGC5 Antibody (Center) Blocking peptide

Synthetic peptide Catalog # BP12332c

### **Specification**

## PCDHGC5 Antibody (Center) Blocking peptide - Product Information

**Primary Accession** 

**09Y5F6** 

# PCDHGC5 Antibody (Center) Blocking peptide - Additional Information

**Gene ID** 56097

#### **Other Names**

Protocadherin gamma-C5, PCDH-gamma-C5, PCDHGC5

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

# **Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

### PCDHGC5 Antibody (Center) Blocking peptide - Protein Information

# Name PCDHGC5

### **Function**

Potential calcium-dependent cell-adhesion protein. May be involved in the establishment and maintenance of specific neuronal connections in the brain.

# **Cellular Location**

Cell membrane; Single-pass type I membrane protein

## PCDHGC5 Antibody (Center) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

# PCDHGC5 Antibody (Center) Blocking peptide - Background

This gene is a member of the protocadherin gamma genecluster, one of three related clusters

Tel: 858.875.1900 Fax: 858.875.1999

tandemly linked onchromosome five. These gene clusters have an immunoglobulin-likeorganization, suggesting that a novel mechanism may be involved intheir regulation and expression. The gamma gene cluster includes 22genes divided into 3 subfamilies. Subfamily A contains 12 genes, subfamily B contains 7 genes and 2 pseudogenes, and the more distantly related subfamily C contains 3 genes. The tandem array of 22 large, variable region exons are followed by a constant region, containing 3 exons shared by all genes in the cluster. Each variable region exon encodes the extracellular region, whichincludes 6 cadherin ectodomains and a transmembrane region. The constant region exons encode the common cytoplasmic region. These neural cadherin-like cell adhesion proteins most likely play acritical role in the establishment and function of specificcell-cell connections in the brain. Alternative splicing has been described for the gamma cluster genes.
