

CCR1 Antibody (C-term) Blocking peptide

Synthetic peptide Catalog # BP12775b

Specification

CCR1 Antibody (C-term) Blocking peptide - Product Information

Primary Accession

P32246

CCR1 Antibody (C-term) Blocking peptide - Additional Information

Gene ID 1230

Other Names

C-C chemokine receptor type 1, C-C CKR-1, CC-CKR-1, CCR1, HM145, LD78 receptor, Macrophage inflammatory protein 1-alpha receptor, MIP-1alpha-R, RANTES-R, CD191, CCR1, CMKBR1, CMKR1, SCYAR1

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

CCR1 Antibody (C-term) Blocking peptide - Protein Information

Name CCR1

Synonyms CMKBR1, CMKR1, SCYAR1

Function

Receptor for a C-C type chemokine. Binds to MIP-1-alpha, MIP- 1-delta, RANTES, and MCP-3 and, less efficiently, to MIP-1-beta or MCP- 1 and subsequently transduces a signal by increasing the intracellular calcium ions level. Responsible for affecting stem cell proliferation.

Cellular Location

Cell membrane; Multi-pass membrane protein

Tissue Location

Widely expressed in different hematopoietic cells.

CCR1 Antibody (C-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

CCR1 Antibody (C-term) Blocking peptide - Background

This gene encodes a member of the beta chemokine receptorfamily, which is predicted to be a seven transmembrane proteinsimilar to G protein-coupled receptors. The ligands of thisreceptor include macrophage inflammatory protein 1 alpha (MIP-1alpha), regulated on activation normal T expressed and secretedprotein (RANTES), monocyte chemoattractant protein 3 (MCP-3), andmyeloid progenitor inhibitory factor-1 (MPIF-1). Chemokines andtheir receptors mediated signal transduction are critical for therecruitment of effector immune cells to the site of inflammation. Knockout studies of the mouse homolog suggested the roles of thisgene in host protection from inflammatory response, andsusceptibility to virus and parasite. This gene and other chemokinereceptor genes, including CCR2, CCRL2, CCR3, CCR5 and CCXCR1, arefound to form a gene cluster on chromosome 3p. [provided byRefSeq].
