

TAC4 Antibody (C-term) Blocking peptide
Synthetic peptide
Catalog # BP12845b**Specification**

TAC4 Antibody (C-term) Blocking peptide - Product InformationPrimary Accession [Q86UU9](#)**TAC4 Antibody (C-term) Blocking peptide - Additional Information****Gene ID** 255061**Other Names**

Tachykinin-4, Preprotachykinin-C, PPT-C, Endokinin-A, EKA, Endokinin-A/B, EKA/B, Endokinin-C, EKC, TAC4 ([HGNC:16641](http://www.genenames.org/cgi-bin/gene_symbol_report?hgnc_id=16641))

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

TAC4 Antibody (C-term) Blocking peptide - Protein Information**Name** TAC4 ([HGNC:16641](#))**Function**

Tachykinins are active peptides which excite neurons, evoke behavioral responses, are potent vasodilators and secretagogues, and contract (directly or indirectly) many smooth muscles. Endokinin-A induces thermal hyperalgesia and pain-related behavior such as scratching following intrathecal administration in rats. These effects are suppressed by treatment with endokinin-C. Endokinin-A/B reduces arterial blood pressure and increases sperm motility.

Cellular Location

Secreted.

Tissue Location

Expressed at low levels in the uterus of both pregnant and non-pregnant women. Isoform 1 is found only in the adrenal gland and fetal liver. Isoform 2 is found in heart, liver, bone marrow, prostate, adrenal gland and testis. Isoform 3 and isoform 4 are expressed predominantly in adrenal gland and placenta

TAC4 Antibody (C-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

TAC4 Antibody (C-term) Blocking peptide - Background

This gene is a member of the tachykinin family of neurotransmitter-encoding genes. Tachykinin proteins are cleaved into small, secreted peptides that activate members of a family of receptor proteins. The products of this gene preferentially activate tachykinin receptor 1, and are thought to regulate peripheral endocrine and paracrine functions including blood pressure, the immune system, and endocrine gland secretion. The products of this gene lack a dibasic cleavage site found in other tachykinin proteins. Consequently, the nature of the cleavage products generated in vivo remains to be determined. Multiple transcript variants encoding different isoforms have been found for this gene.
