

SLC17A8 Antibody (N-term) Blocking peptide
Synthetic peptide
Catalog # BP13493a**Specification**

SLC17A8 Antibody (N-term) Blocking peptide - Product InformationPrimary Accession [Q8NDX2](#)**SLC17A8 Antibody (N-term) Blocking peptide - Additional Information**

Gene ID 246213

Other Names

Vesicular glutamate transporter 3, VGLUT3, Solute carrier family 17 member 8, SLC17A8, VGLUT3

Target/Specificity

The synthetic peptide sequence used to generate the antibody AP13493a was selected from the N-term region of SLC17A8. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

SLC17A8 Antibody (N-term) Blocking peptide - Protein InformationName SLC17A8 ([HGNC:20151](#))

Synonyms VGLUT3

Function

Multifunctional transporter that transports L-glutamate as well as multiple ions such as chloride, sodium and phosphate (PubMed:33440152, PubMed:12151341). At the synaptic vesicle membrane, mainly functions as an uniporter that mediates the uptake of L- glutamate into synaptic vesicles at presynaptic nerve terminals of excitatory neural cells (PubMed:12151341). The L-glutamate uniporter activity is electrogenic and is driven by the proton electrochemical gradient, mainly by the electrical gradient established by the vacuolar H(+)-ATPase across the synaptic vesicle membrane (PubMed:12151341). In addition, functions as a chloride channel that allows a chloride permeation through the synaptic vesicle

membrane that affects the proton electrochemical gradient and promotes synaptic vesicles acidification (By similarity). At the plasma membrane, following exocytosis, functions as a symporter of Na(+) and phosphate from the extracellular space to the cytoplasm allowing synaptic phosphate homeostasis regulation (Probable). The symporter activity is electrogenic (PubMed:33440152). Moreover, operates synergistically with SLC18A3/VACHT under a constant H(+) gradient, thereby allowing striatal vesicular acetylcholine uptake (By similarity).

Cellular Location

Cytoplasmic vesicle, secretory vesicle, synaptic vesicle membrane {ECO:0000250|UniProtKB:Q7TSF2}. Cell membrane; Multi-pass membrane protein. Synapse, synaptosome {ECO:0000250|UniProtKB:Q7TSF2}

Tissue Location

Expressed in amygdala, cerebellum, hippocampus, medulla, spinal cord and thalamus.

SLC17A8 Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

SLC17A8 Antibody (N-term) Blocking peptide - Images**SLC17A8 Antibody (N-term) Blocking peptide - Background**

This gene encodes a vesicular glutamate transporter. The encoded protein transports the neurotransmitter glutamate into synaptic vesicles before it is released into the synaptic cleft. Mutations in this gene are the cause of autosomal-dominant nonsyndromic type 25 deafness. Alternate splicing results in multiple transcript variants.
